NATIONS SERIES / THE WORLD IS WATCHING.

v2.1 / Configuration expansion / Complete journey preserved / Video remains paused

MOBILE / APPROVED VIDEO POSTER

The opening stays. The garage expands.

Same invitation, six-stage form, fabrication, pilot, race, Talon and original book reveal. This review shows source-rendered modular aircraft and static layout compositions; it is not a browser recording.

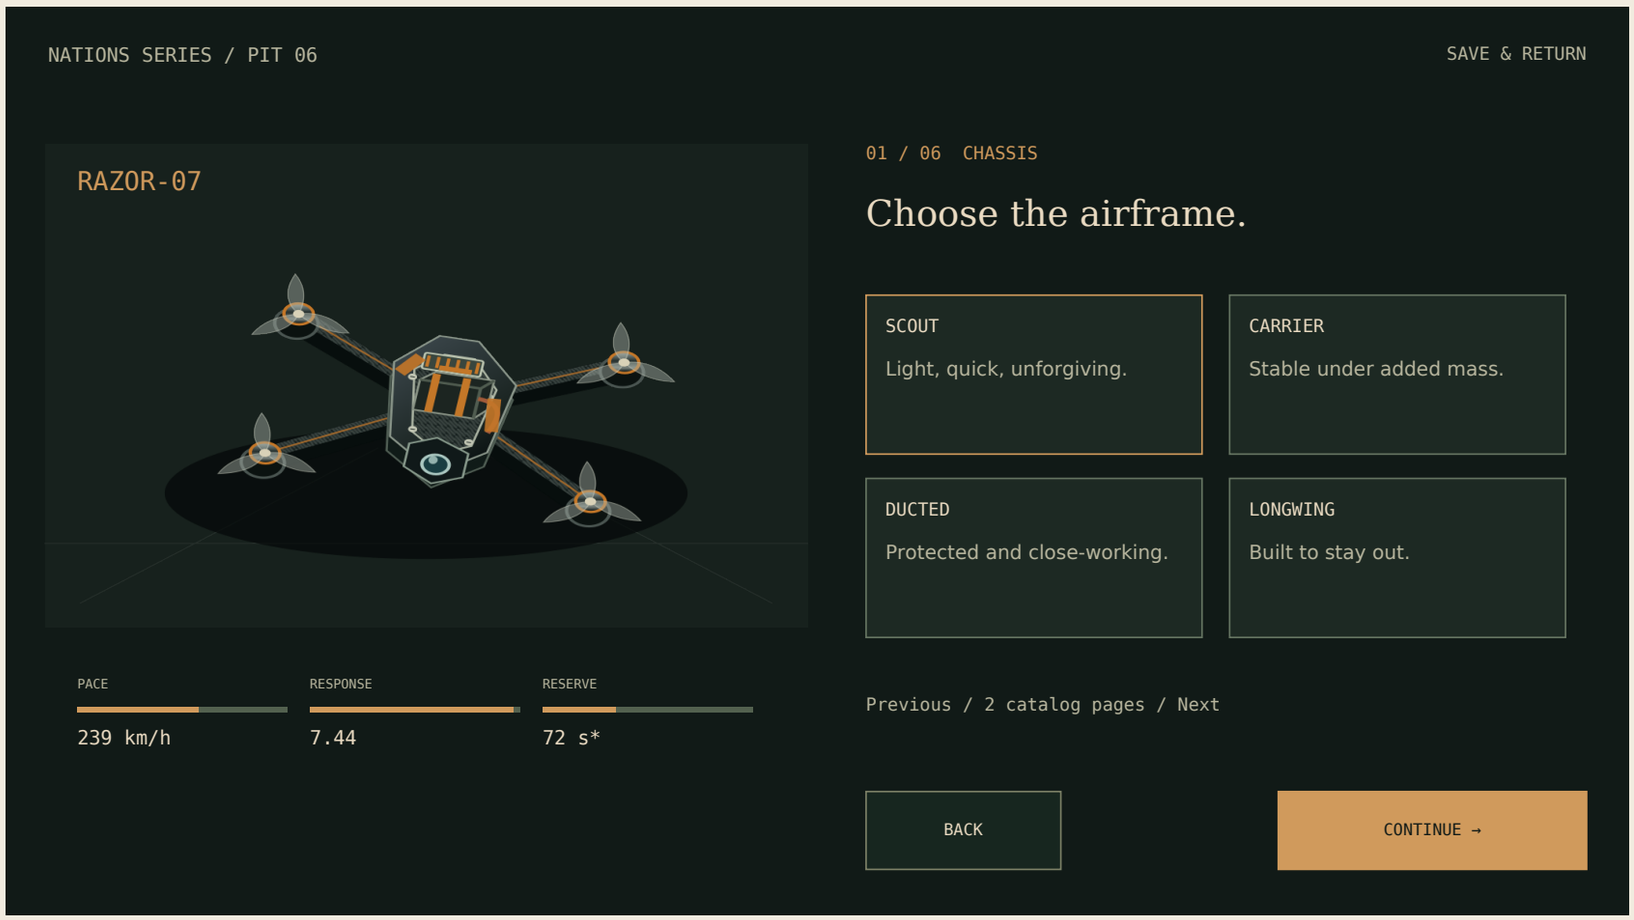

01 / Chassis / Same form. More engineering.

Eight choices; paged cards or cosmetic chips. Actual source renders; mobile and desktop are static compositions of the retained layout.

MOBILE / 390 × 844

DESKTOP / SAME STAGE AND CONFIGURATION

Eight architectures with different motor mounts and body proportions. Original frames remain available.

Expand Engineering for actual mass, inertia, acceleration, damping, wind, boost, heat and previous-selection deltas. The six-step process and workshop stay intact.

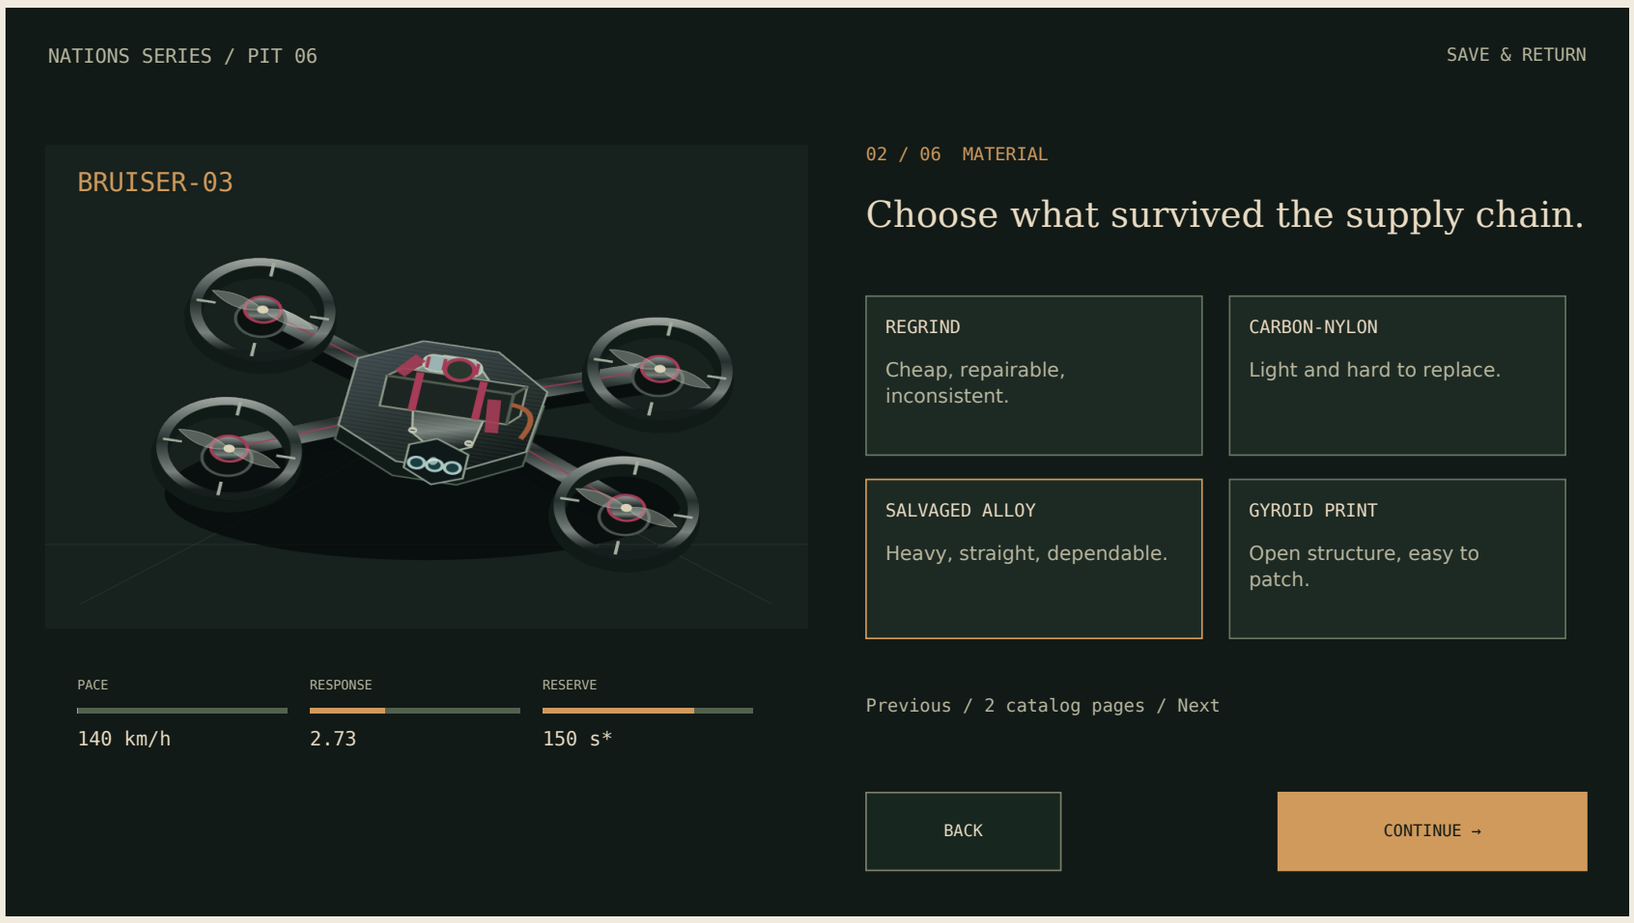

02 / Material / Same form. More engineering.

Eight choices; paged cards or cosmetic chips. Actual source renders; mobile and desktop are static compositions of the retained layout.

MOBILE / 390 × 844

DESKTOP / SAME STAGE AND CONFIGURATION

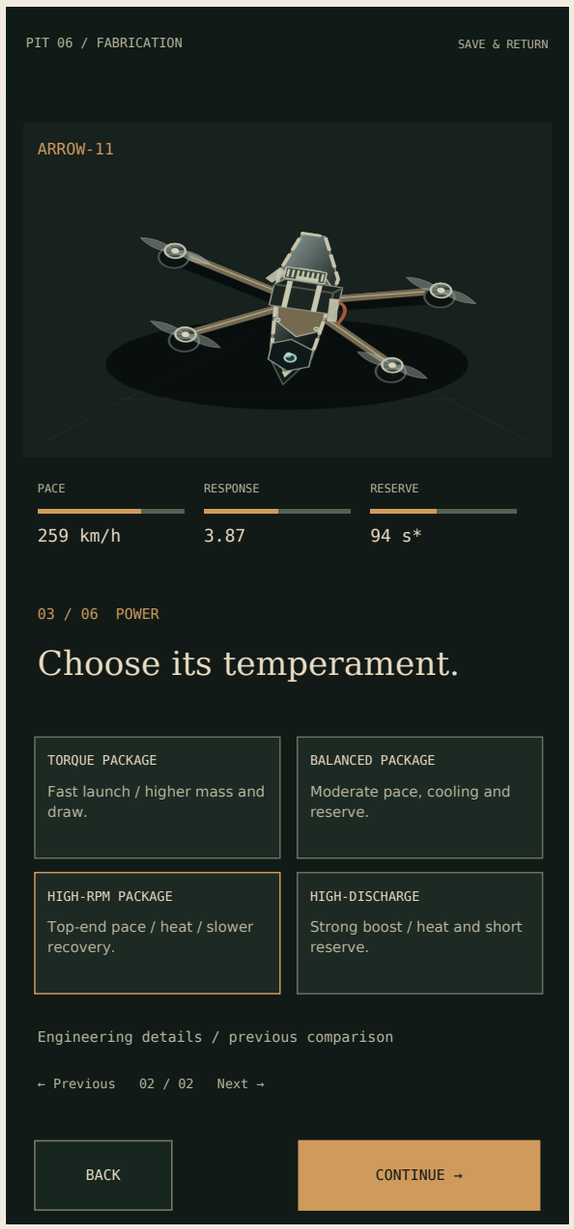

Actual surface patterns and structural treatments. Mass, stiffness and tolerance feed the flight model.

Expand Engineering for actual mass, inertia, acceleration, damping, wind, boost, heat and previous-selection deltas. The six-step process and workshop stay intact.

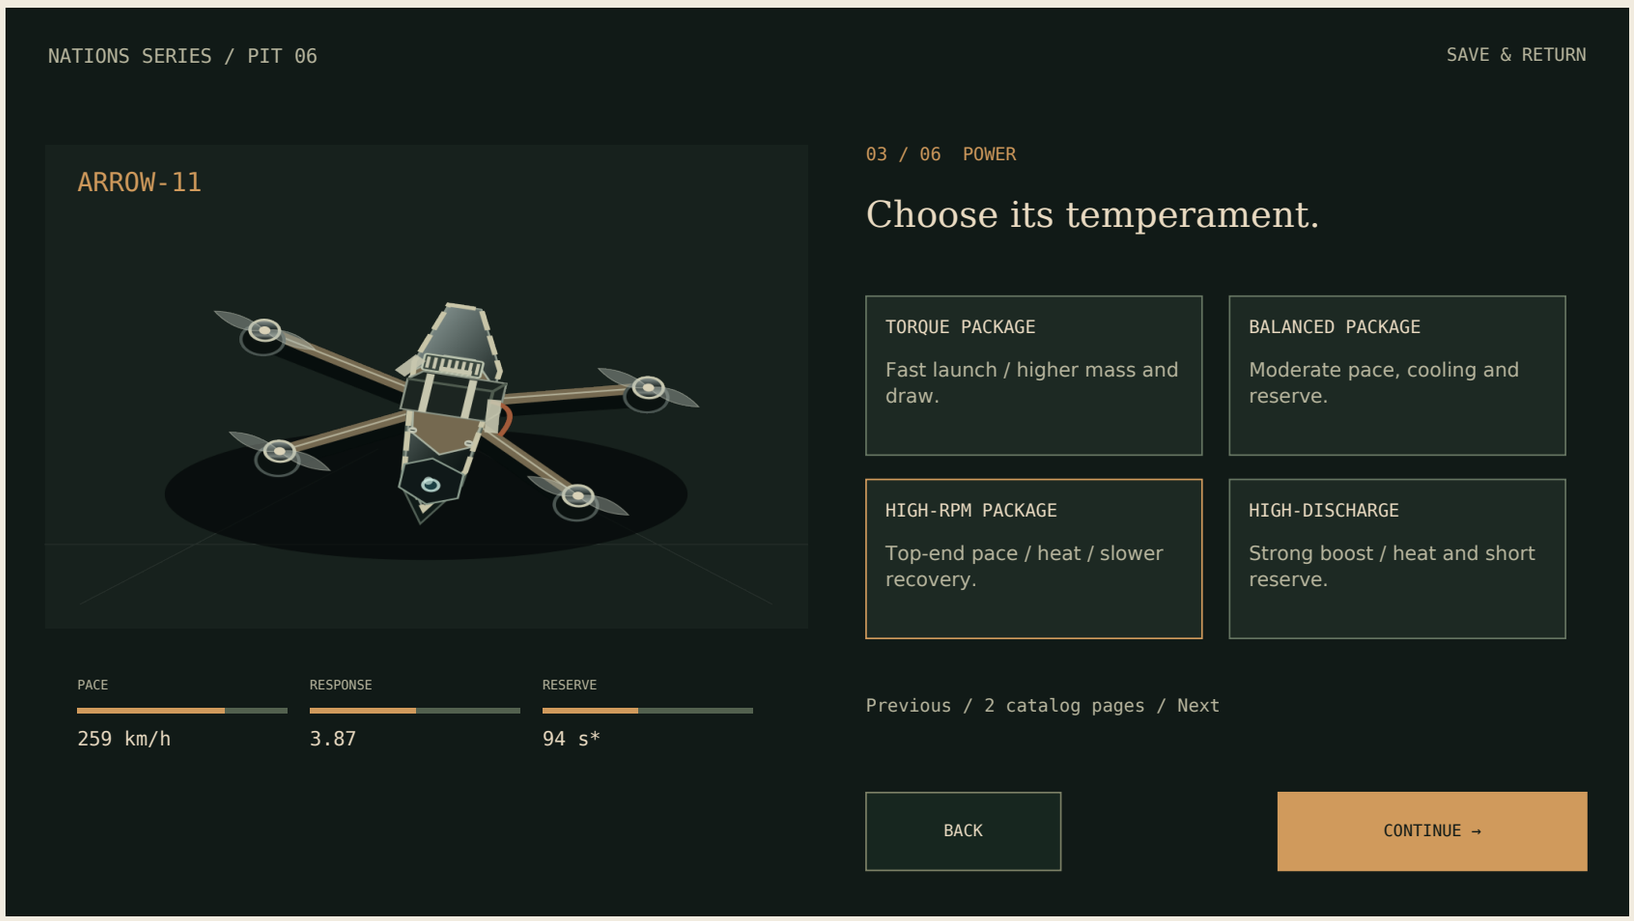

03 / Power / Same form. More engineering.

Eight choices; paged cards or cosmetic chips. Actual source renders; mobile and desktop are static compositions of the retained layout.

MOBILE / 390 × 844

DESKTOP / SAME STAGE AND CONFIGURATION

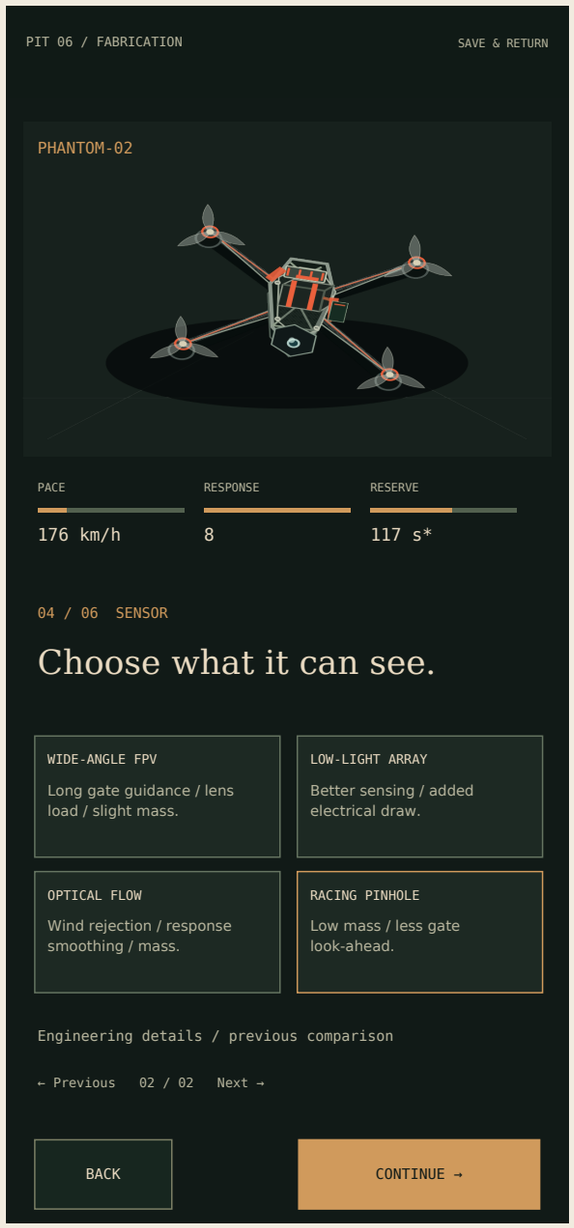

Power packages plus optional motors, props and packs. A blocked pack explains its bay-load conflict.

Expand Engineering for actual mass, inertia, acceleration, damping, wind, boost, heat and previous-selection deltas. The six-step process and workshop stay intact.

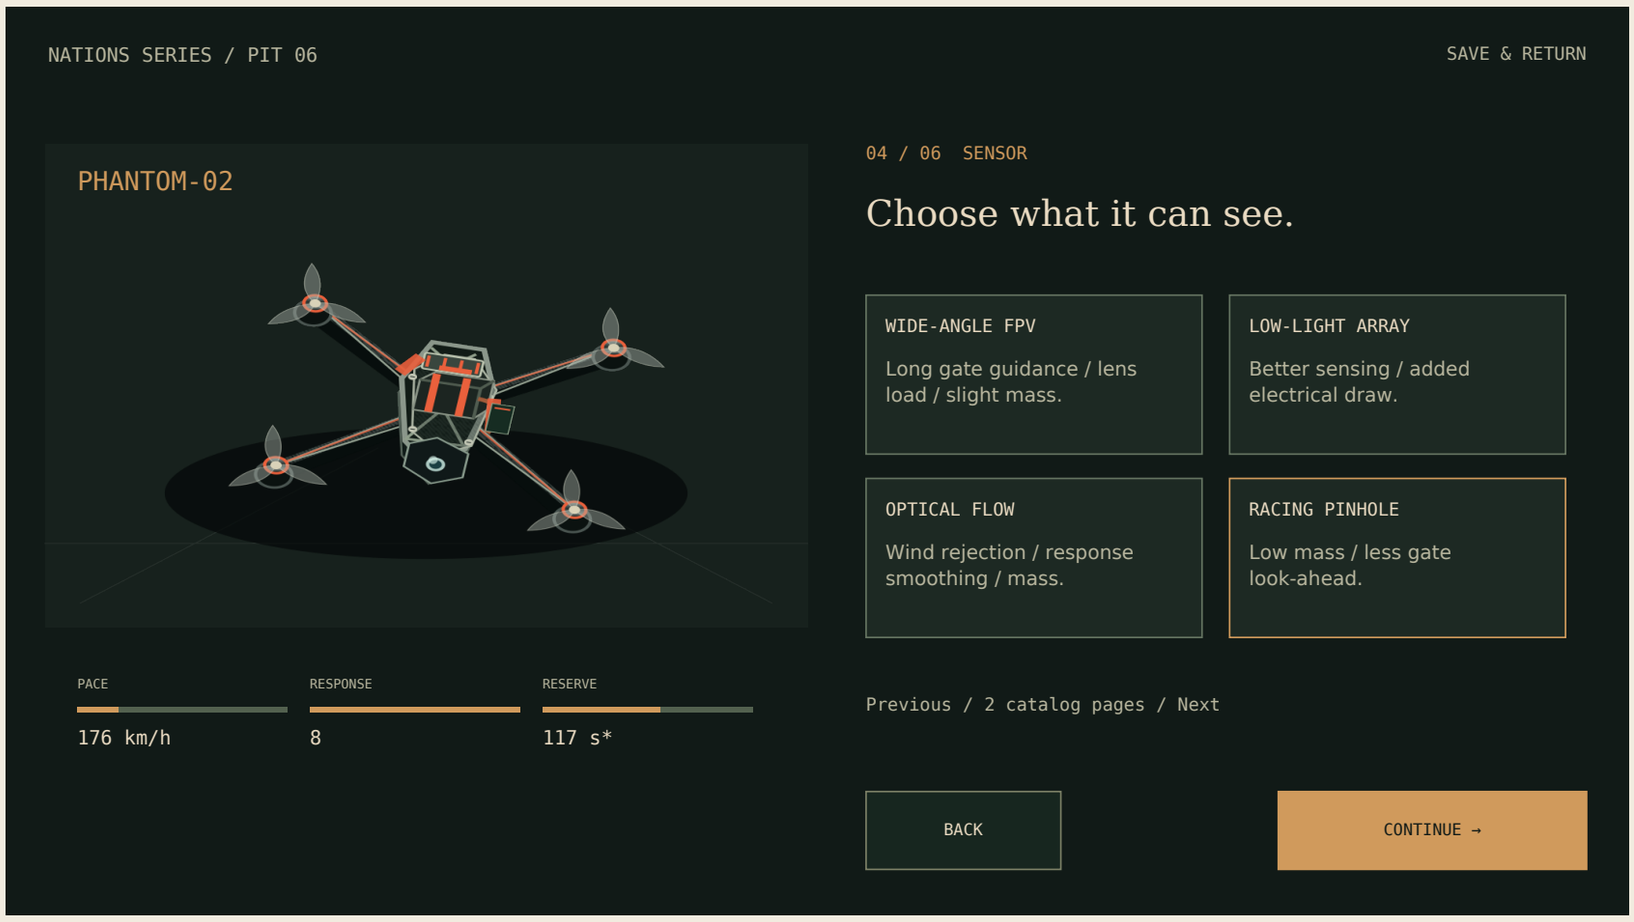

04 / Sensor / Same form. More engineering.

Eight choices; paged cards or cosmetic chips. Actual source renders; mobile and desktop are static compositions of the retained layout.

MOBILE / 390 × 844

DESKTOP / SAME STAGE AND CONFIGURATION

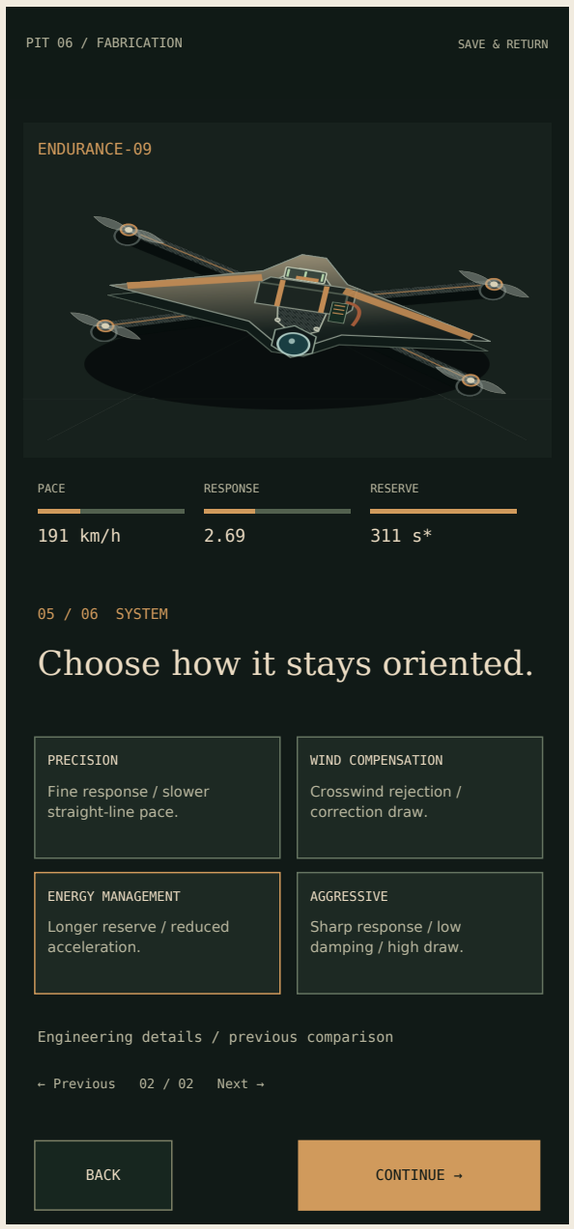

Lens shape/count, electrical draw and actual guidance range change. Thermal imaging is not claimed.

Expand Engineering for actual mass, inertia, acceleration, damping, wind, boost, heat and previous-selection deltas. The six-step process and workshop stay intact.

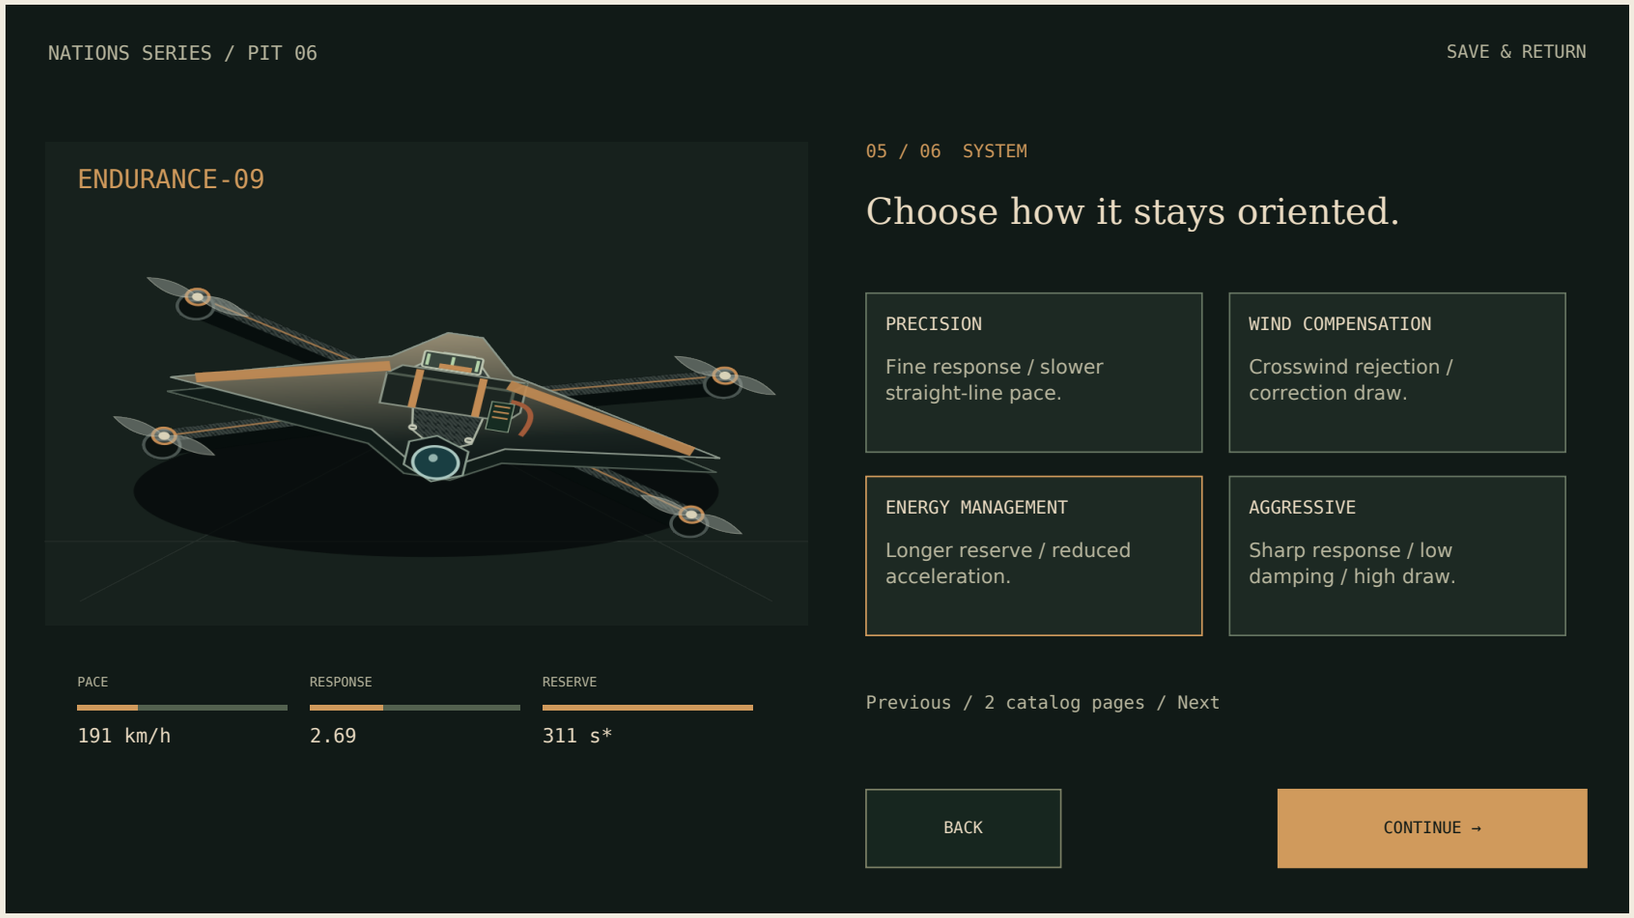

05 / System / Same form. More engineering.

Eight choices; paged cards or cosmetic chips. Actual source renders; mobile and desktop are static compositions of the retained layout.

MOBILE / 390 × 844

DESKTOP / SAME STAGE AND CONFIGURATION

Damping, wind rejection, response and draw have trade-offs. No profile automatically clears gates.

Expand Engineering for actual mass, inertia, acceleration, damping, wind, boost, heat and previous-selection deltas. The six-step process and workshop stay intact.

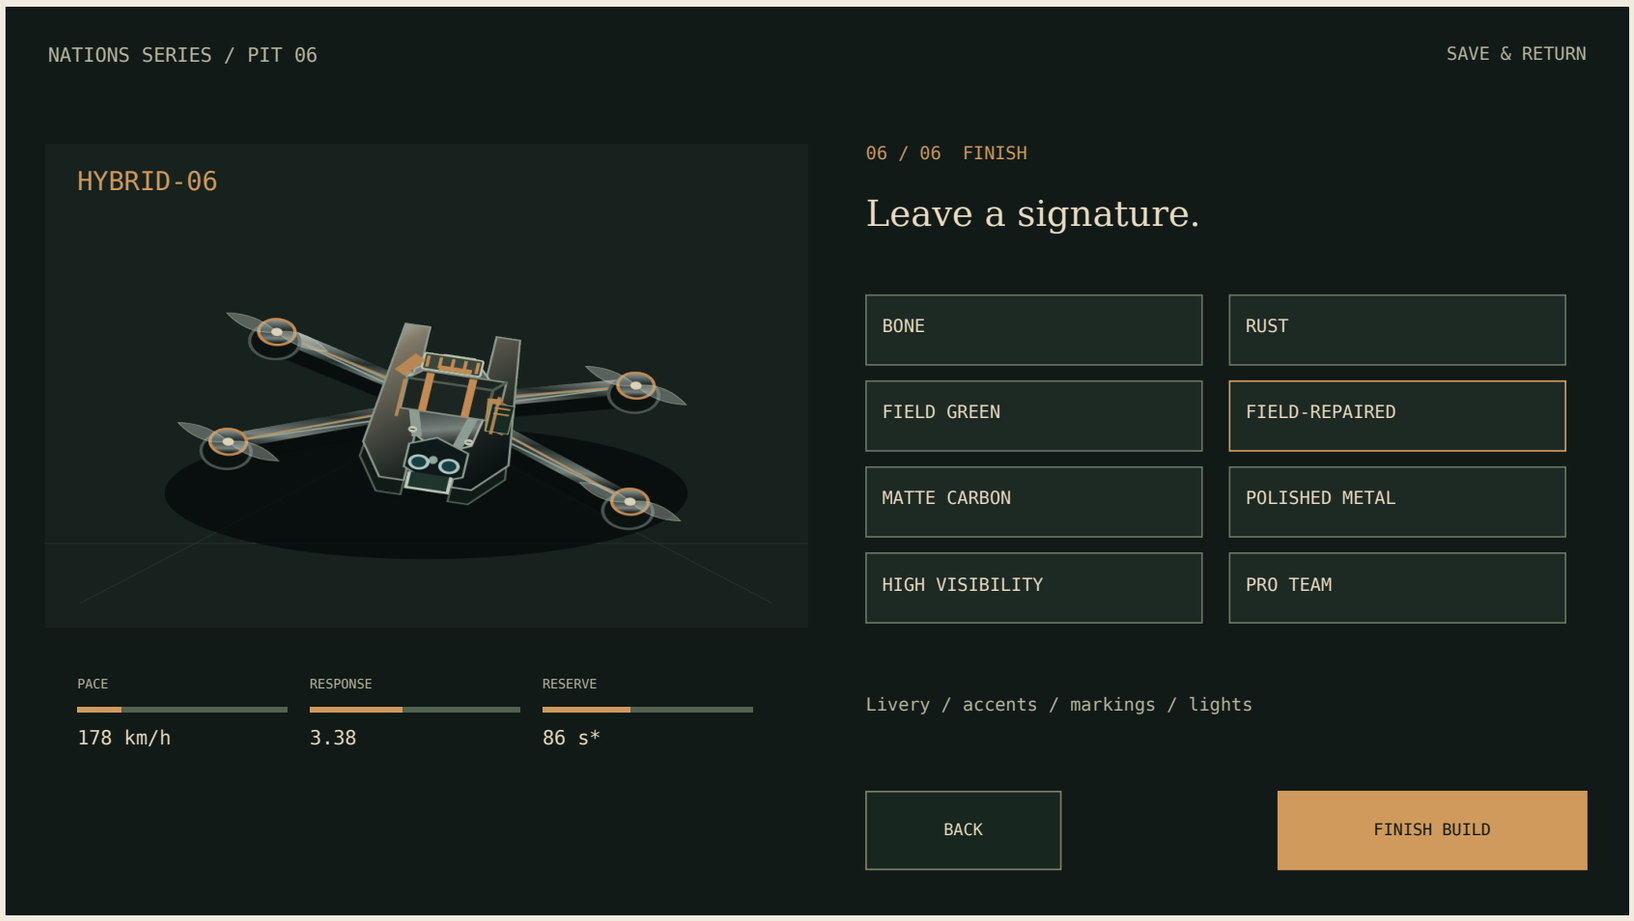

06 / Finish / Same form. More engineering.

Eight choices; paged cards or cosmetic chips. Actual source renders; mobile and desktop are static compositions of the retained layout.

MOBILE / 390 × 844

DESKTOP / SAME STAGE AND CONFIGURATION

Eight finishes, four Japanese liveries, custom accents and edge lights. No performance bonus.

Expand Engineering for actual mass, inertia, acceleration, damping, wind, boost, heat and previous-selection deltas. The six-step process and workshop stay intact.

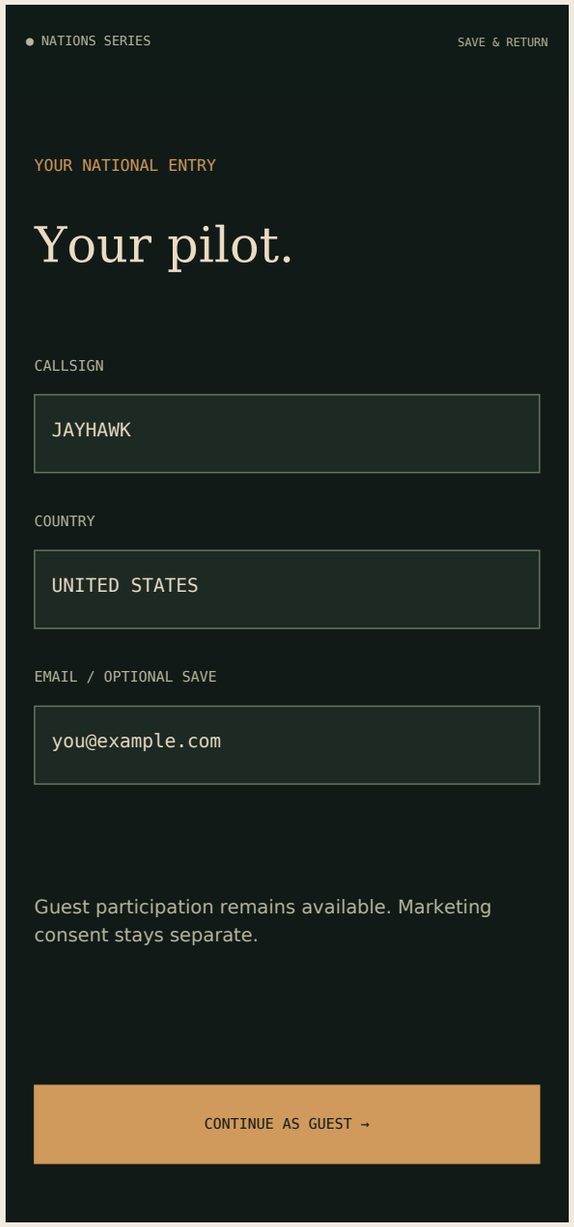

07 / Fabrication becomes a national entry.

Original fabrication, locked queue and inspection remain. Pilot/configuration carry forward without a new onboarding screen.

FABRICATE / INSPECT

PILOT / GUEST OR REGISTERED

Physical continuity

The selected configuration stays with the aircraft into the grid.

Preserve the workshop

All five field trials, technical views for original frames and existing save/share functions remain.

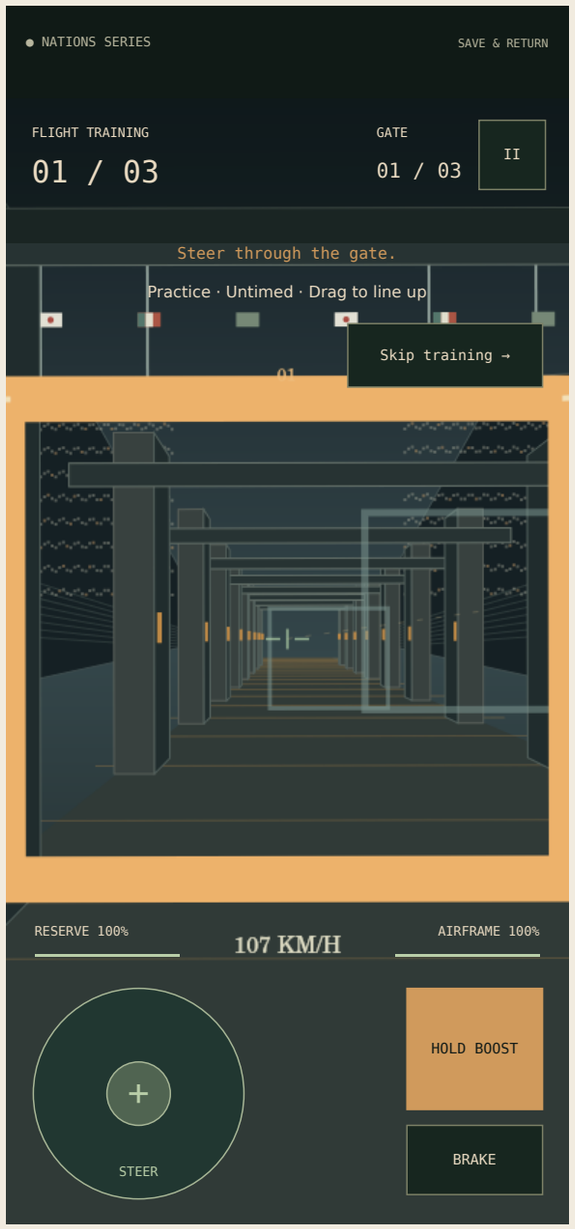

Fast return

Saved machines can be raced directly, duplicated or quick-tuned.

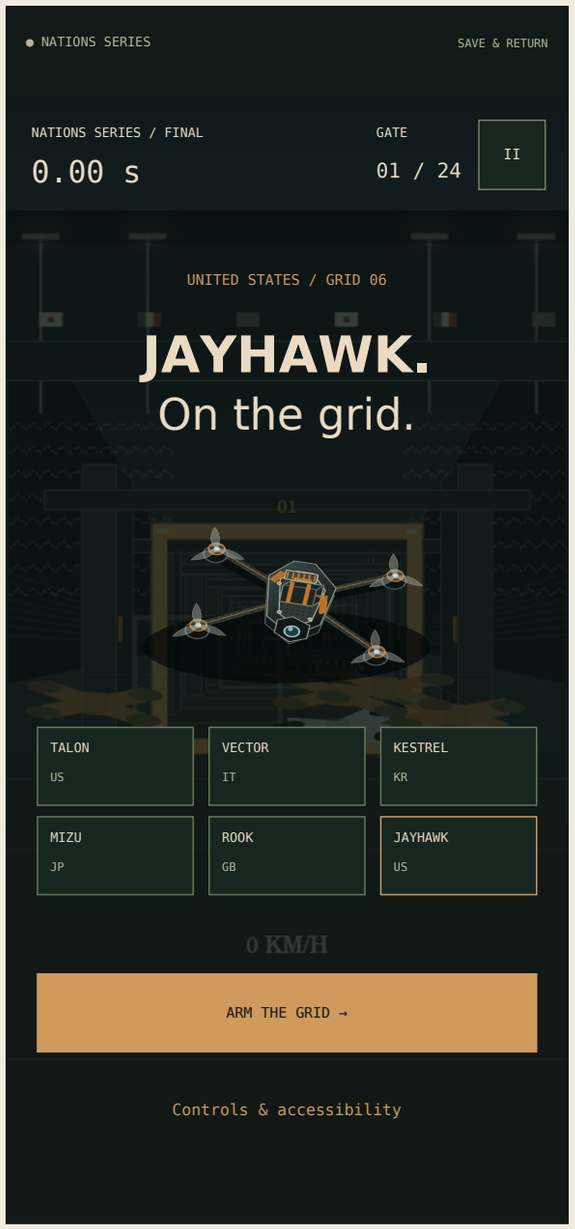

08 / Learn through play. Then race.

Three-gate training and countdown are retained. v2.1 adds mass/inertia/heat effects, trajectory guidance and compatible ghost/split feedback.

TRAINING / EXISTING BASELINE

STARTING GRID / BASELINE LAYOUT

Same controls

Relative thumb pad, boost/brake, keyboard and accessible alternate aim remain.

No fabricated mastery

Misses, damage, time and reserve still determine the outcome.

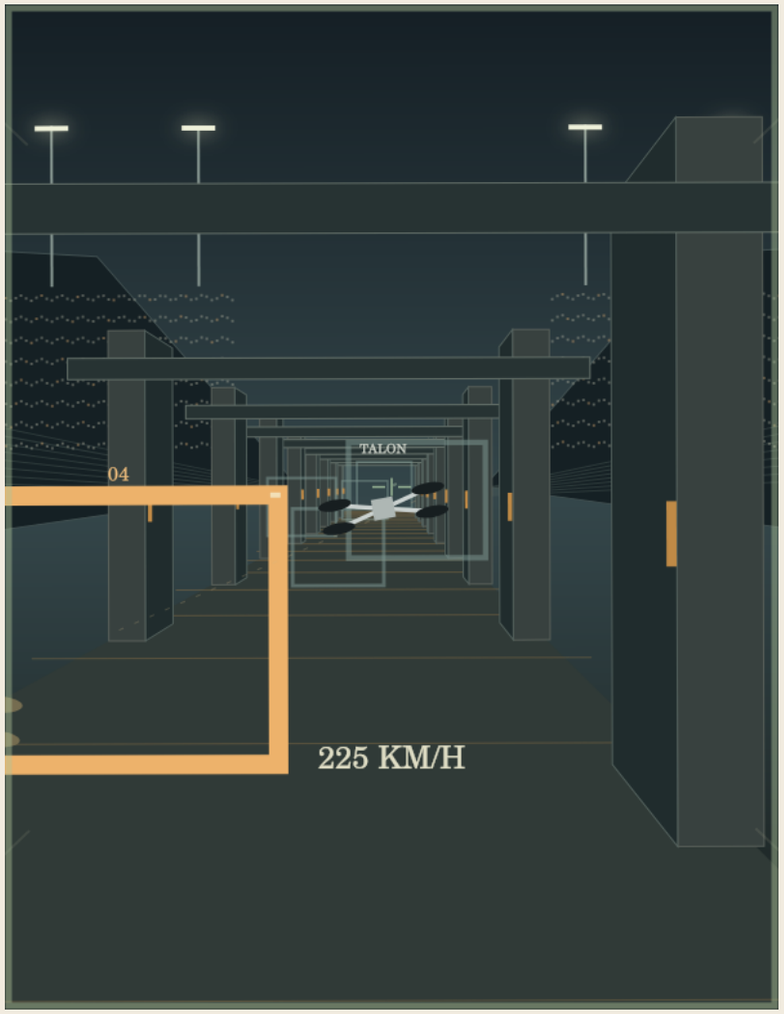

Actual phone test pending

These compositions and model tests do not validate two-thumb play.

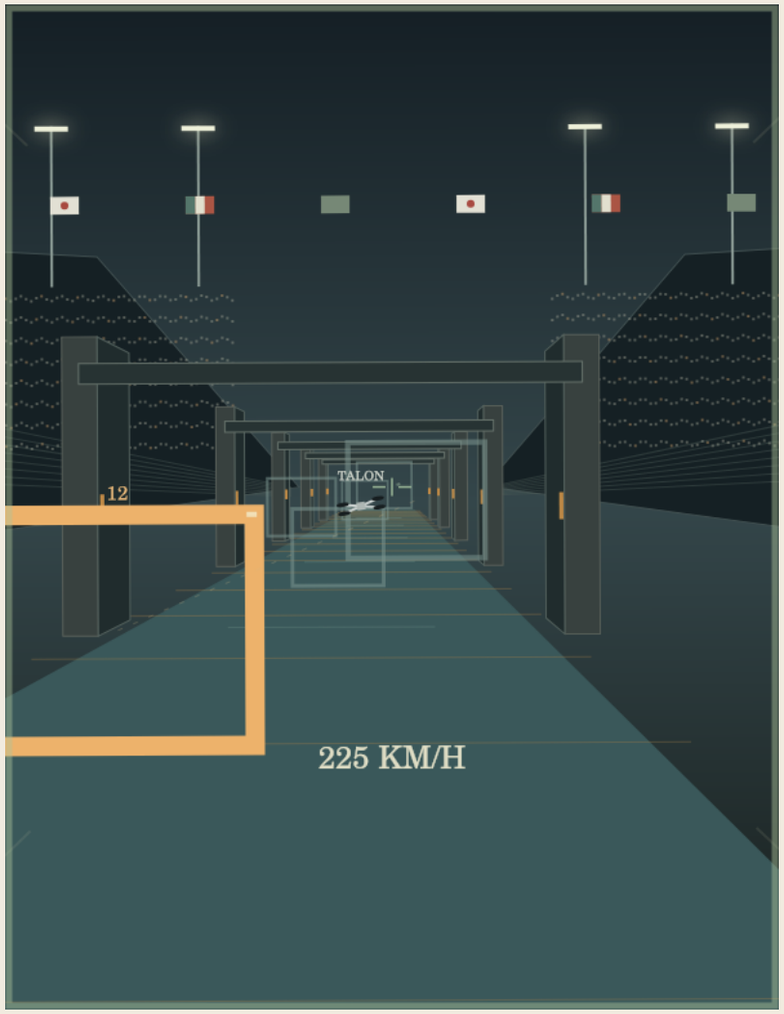

09 / Every configuration changes the flight.

Direct procedural canvas renders from v2.1 source. This is stylized browser rendering, not final cinematic footage or a device capture.

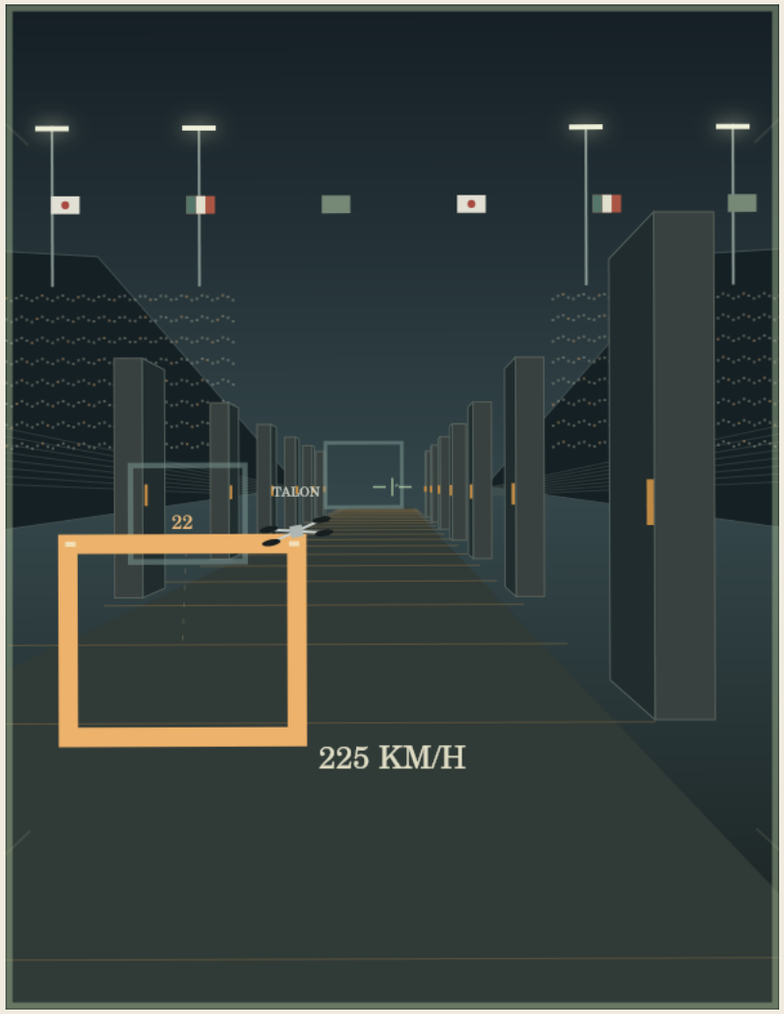

ARTIFICIAL CANYON

RIVER CROSSING

THE LAST LINE

Mass and acceleration affect entry/exit. Wind matters most at the river. Narrow late gates reward timely control. The projected trajectory uses the current model and controls; it does not steer for you.

The complete journey. One changed turning point.

AUTHOR LOCK / 21 OCTOBER 2026 / Planning only. Opening video first; all engineering and racing decisions retained.

ACT I / THE DREAM

FPV hero → Enter the Grid → six-stage garage → fabrication and inspection → pilot profile → optional training → grid countdown → championship race.

ACT II / THE CHAMPION

Honest leaderboard → Meet Talon → sporting profile concludes. No contract, military suggestion or recruitment association appears inside his profile.

ACT III / THE PRICE

Broadcast ended → eligible performance receives private offer → ACCEPT: existing Europe map / DECLINE: brief map glimpse → original book reveal → sample and optional world.

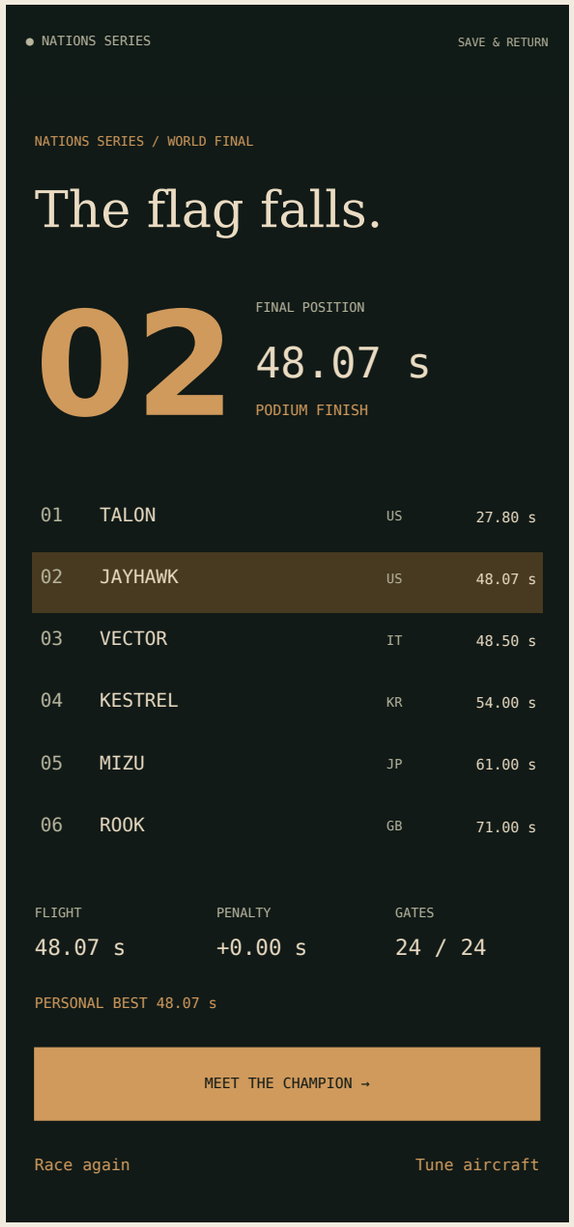

Returning pilots

Race again, tune, hangar and workshop stay fast. Future friend challenges do not force a repeat of this narrative. Nonqualifying visitors still reach Talon and the book.

The leaderboard asks: Who beat me?

RETAINED SPORTING PRESENTATION / Illustrative result layout. No new race result or timing calibration is claimed.

LEADERBOARD / EXISTING LAYOUT

MEET TALON / SPORTING PROFILE

Continue enters Talon

Remove the pre-profile ping from this branch. Position and time remain the actual race result.

The full sporting beat

Keep black-and-silver identity, racing line, pause, transcript and next/previous controls.

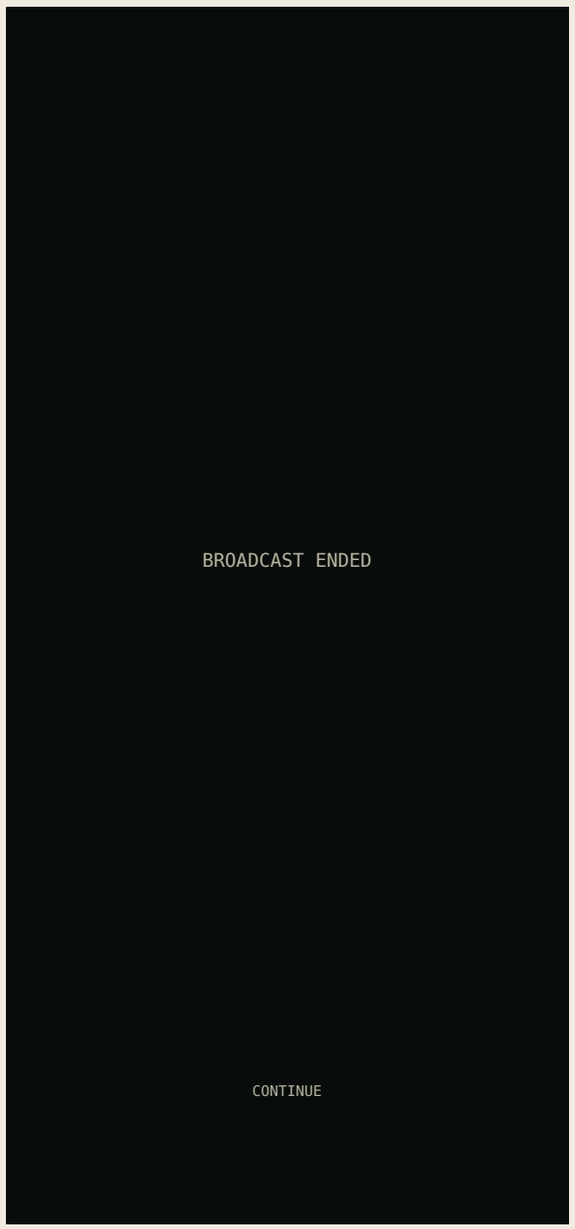

No implied employer

No offer icon, war terminology, map or anonymous sender inside the profile.

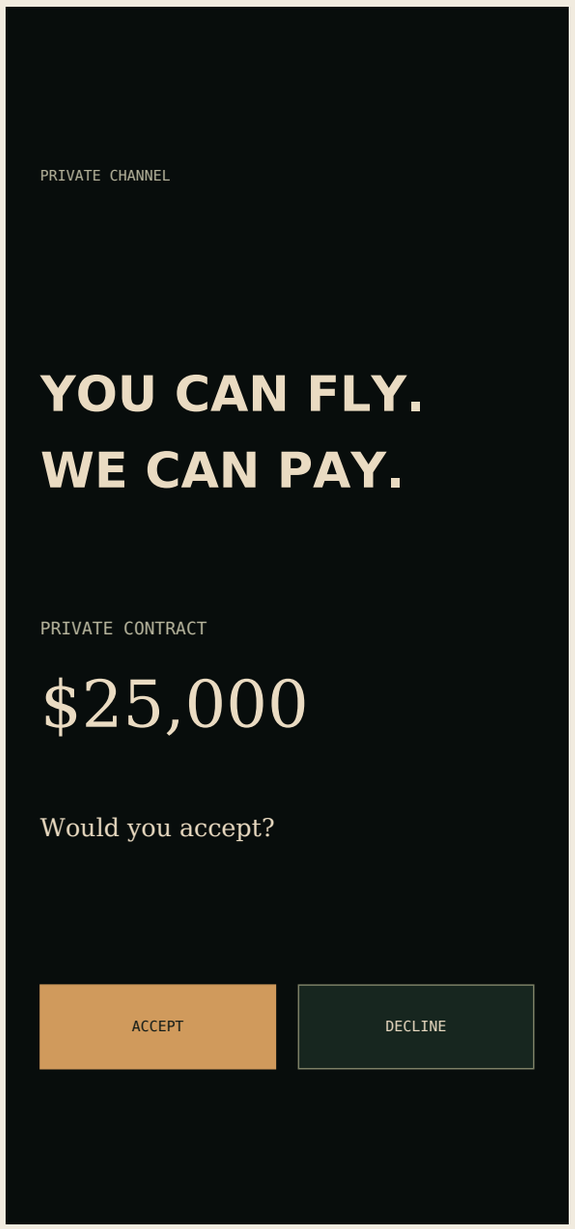

Let the sporting story end. Then interrupt it.

PROPOSED TRANSITION / Quiet closure after profile exit. No hacking effect, logo reveal, countdown or compulsory audio.

01 / BROADCAST ENDED

02 / UNSOLICITED OFFER

Closure is brief

About one second, with Continue available. Reduced motion uses an immediate quiet state.

The decision stays

No timer or auto-accept. Both buttons have equal prominence and usable focus targets.

Review-only amount

$25,000 is a creative placeholder. Confirm or revise before implementation; it is not established manuscript canon.

YOU CAN FLY. WE CAN PAY.

PROPOSED DESKTOP OFFER / No employer, destination, mission or military purpose appears before the decision.

PRIVATE CHANNEL

YOU CAN FLY.
WE CAN PAY.

PRIVATE CONTRACT — $25,000

Would you accept?

ACCEPT

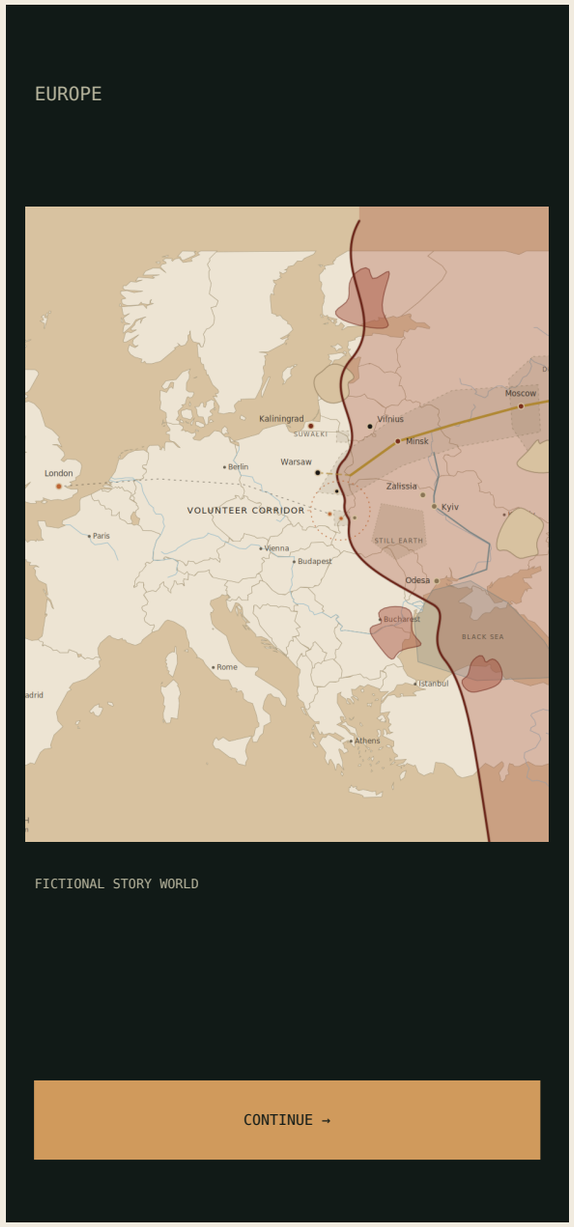

DECLINE

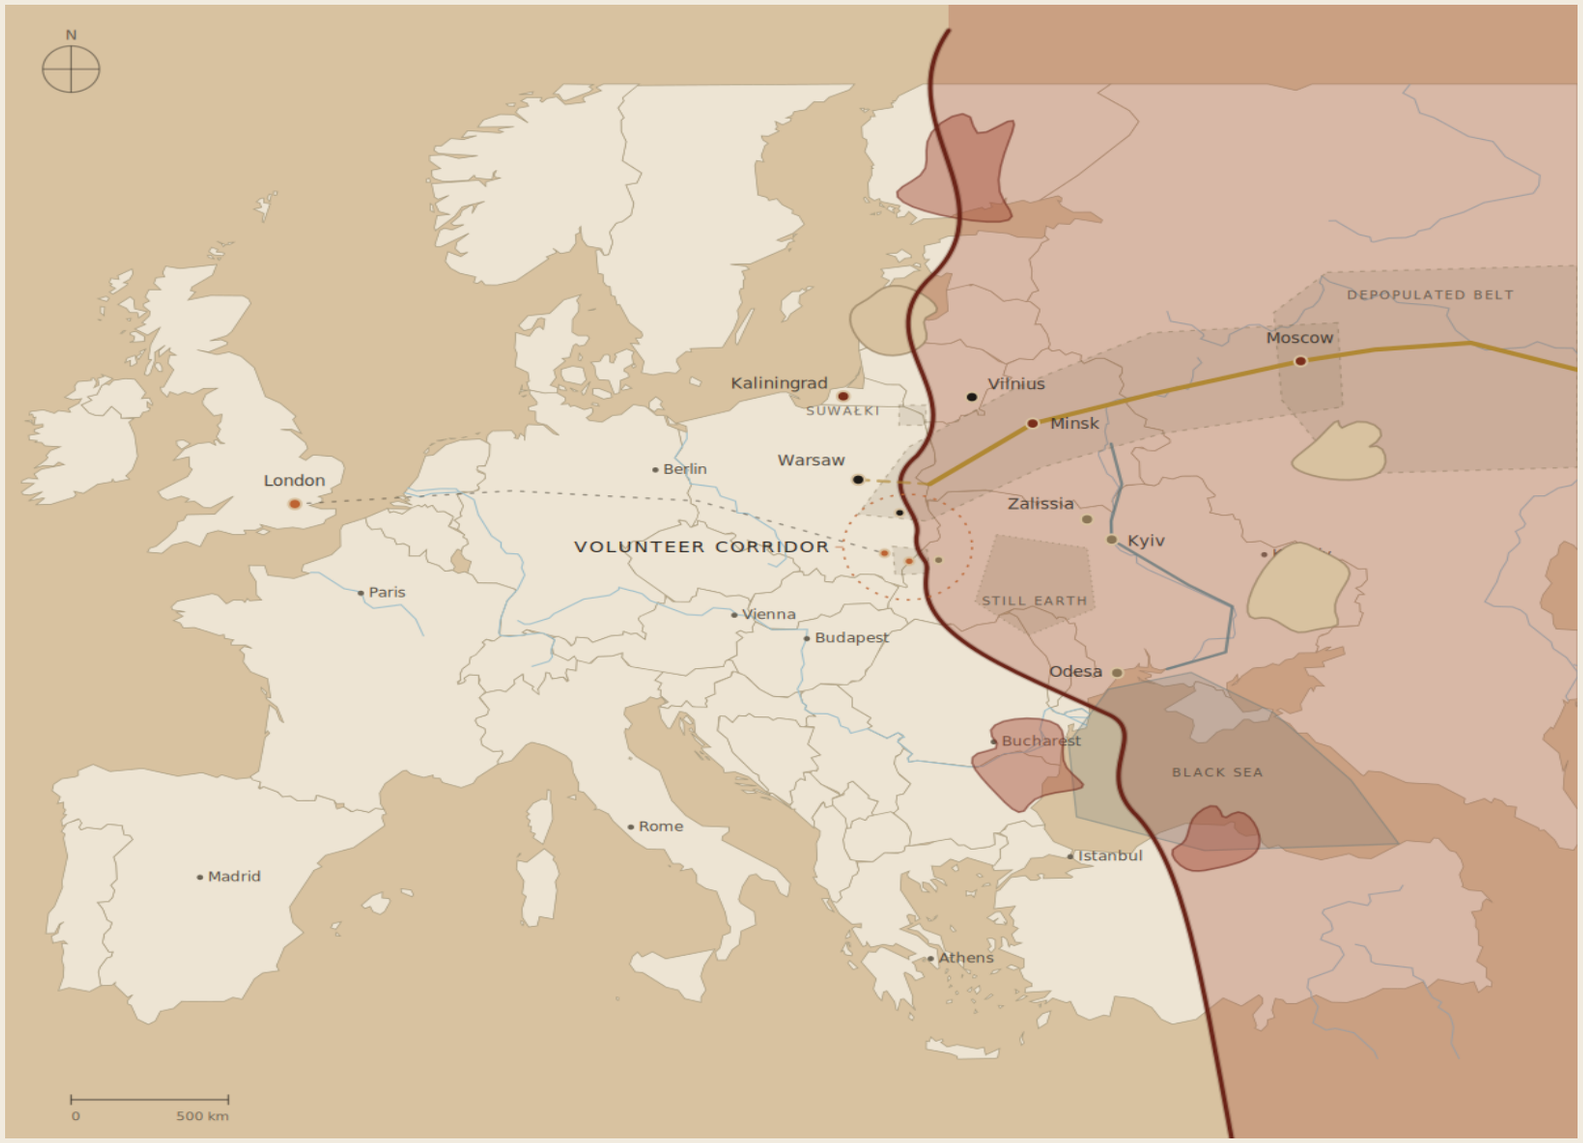

AUTHOR REVIEW / AMOUNT UNCONFIRMED

Accept: Europe becomes the consequence.

SOURCE MAP + PROPOSED WRAPPER / The image is the existing local FrontMap geography SVG with its stylesheet, rendered statically.

ACCEPT / COMPACT MOBILE PRESENTATION

Overview → contested geography → anonymous contracts → wider scale.

These are proposed visibility states of the existing component. No new boundaries, routes or canon locations are invented.

The map reveals. It does not assign a mission.

PROPOSED REVEAL STATES / Reuse basemap, front geometry, atlas layers and anonymous ledger. Keep Continue to novel visible throughout.

01 / Orient

Reuse TheaterBasemap and real projected coordinates. Begin with geography; withhold character names, archive/book branding and dense detail until after the choice.

02 / Reveal the front

Enable the existing contested/front overlay in its authored story state. Label this fictional story geography, not a contemporary conflict map. No invented date.

03 / Reveal private records

Switch the same FrontMap to its neutral Contracts perspective and private filter. Current 130 seeded markers are illustrative worldbuilding, not canon-confirmed mission locations.

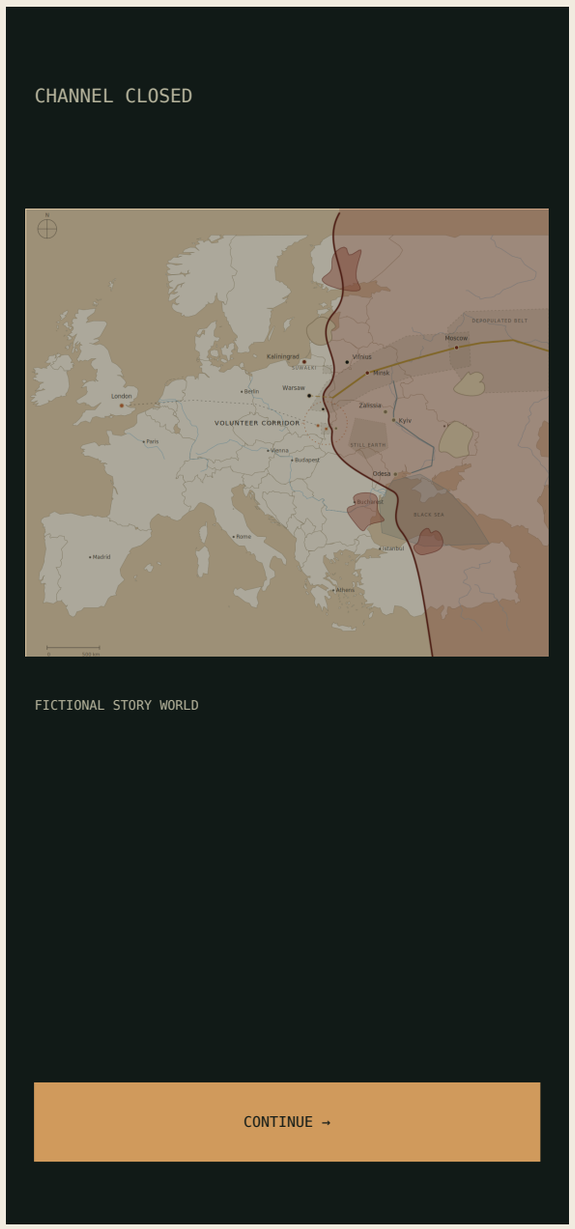

04 / Let scale emerge

Widen attention across existing geography. Stop before protected events, routes or character associations. Next/Back/Continue are manual; the full map remains available later.

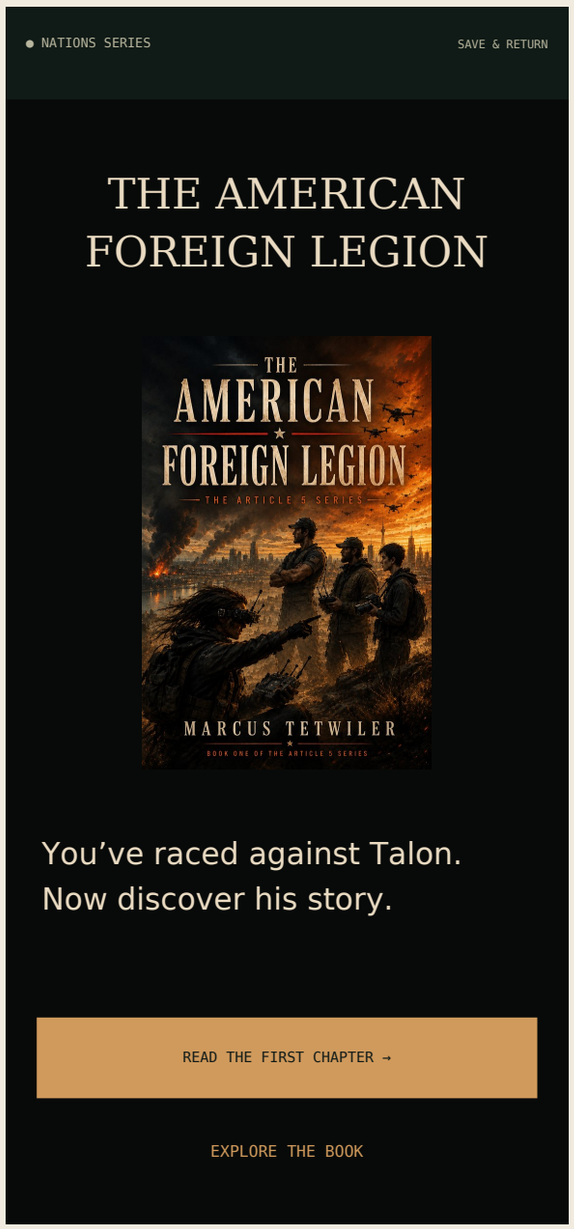

Decline: the offer disappears. The world remains.

PROPOSED SHORT BRANCH / No judgment, score adjustment, lost reward or permanent access restriction.

DECLINE / FRAGMENT ONLY

BOTH BRANCHES / ORIGINAL BOOK REVEAL

A glimpse, not a tour

A brief static crop of the same geography. Continue is immediately available; no contract detail or staged exploration.

No irreversible consequence

The saved choice is narrative continuity only. Map access, aircraft and future races remain intact.

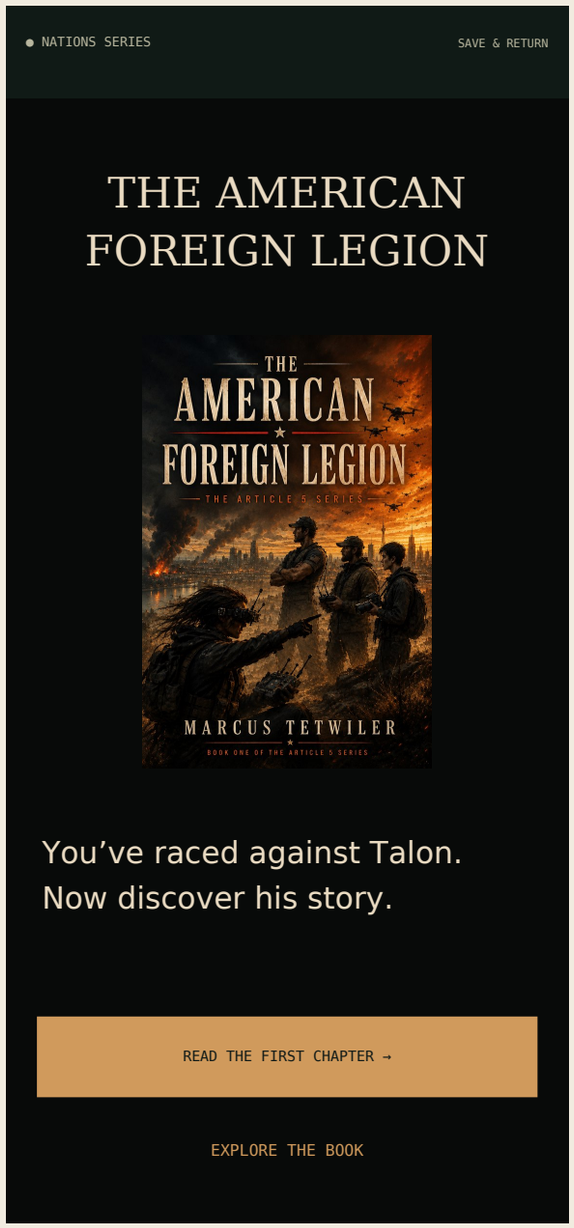

Original reveal retained

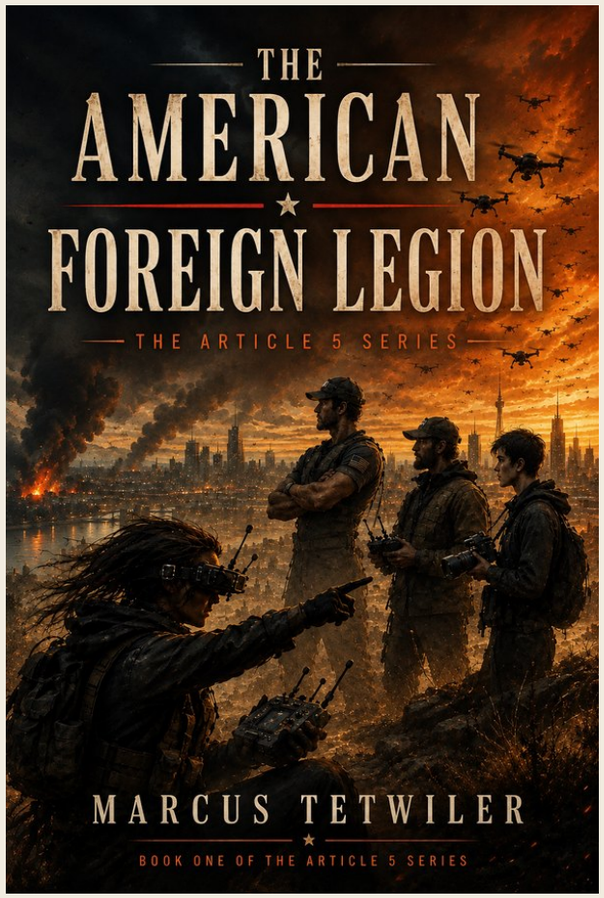

Keep cover and sample-reading primary. Launch-list secondary in the existing book area; no artwork replacement.

11 / The first race still opens the novel.

The original cover, sample CTA and book reveal are preserved. Optional world exploration follows discovery.

ORIGINAL BOOK PRESENTATION

Primary conversion

Read the first chapter. The existing sample may reveal more than the interactive experience.

Optional depth

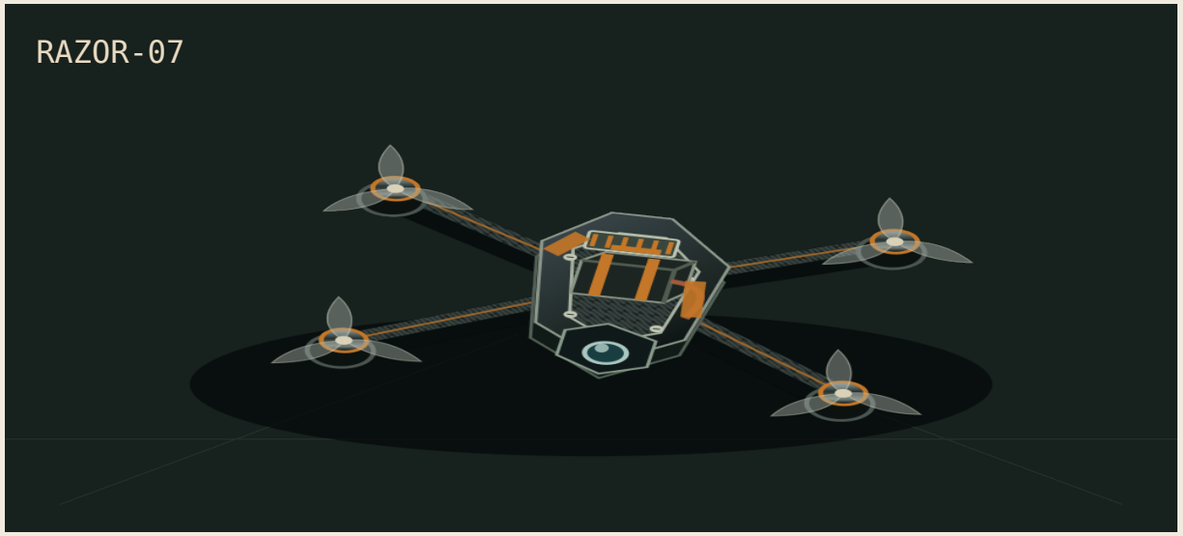

Map, glossary, workshop, store, philanthropy and author stay available.

No repeated forced reveal

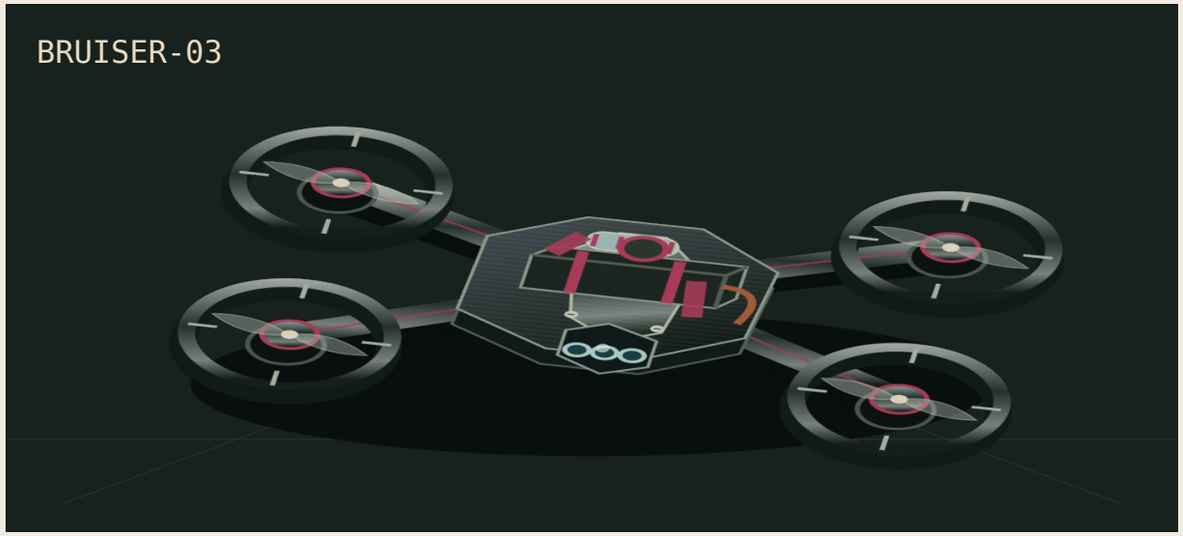

Future friend competition retains a shorter returning-player route.

12 / Eight machines. Reusable components.

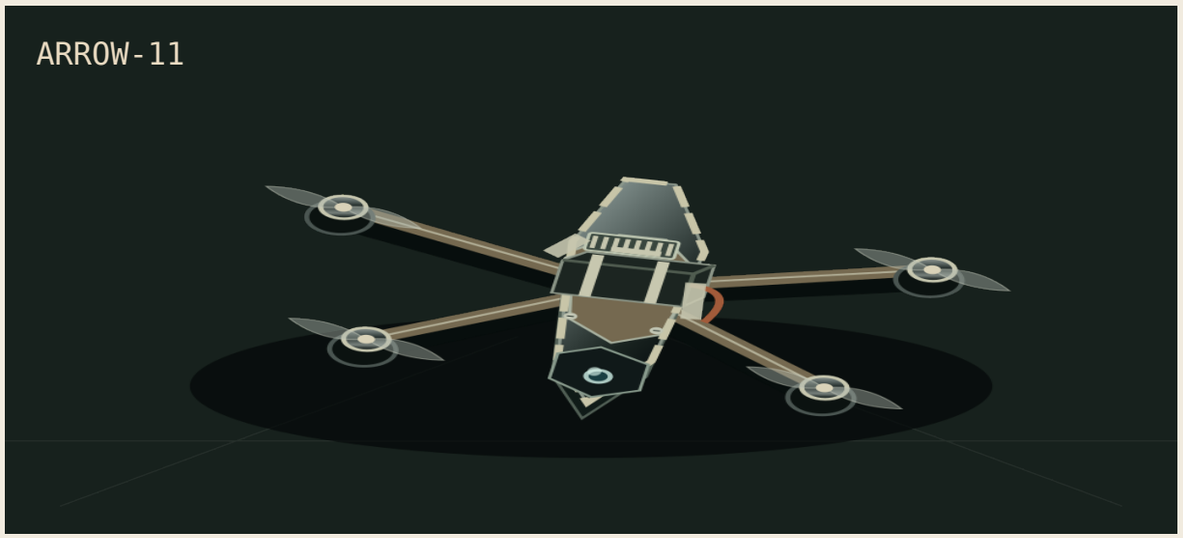

Actual source-rendered examples. User-assigned aircraft names are not fixed classes; personality labels emerge from the shared model.

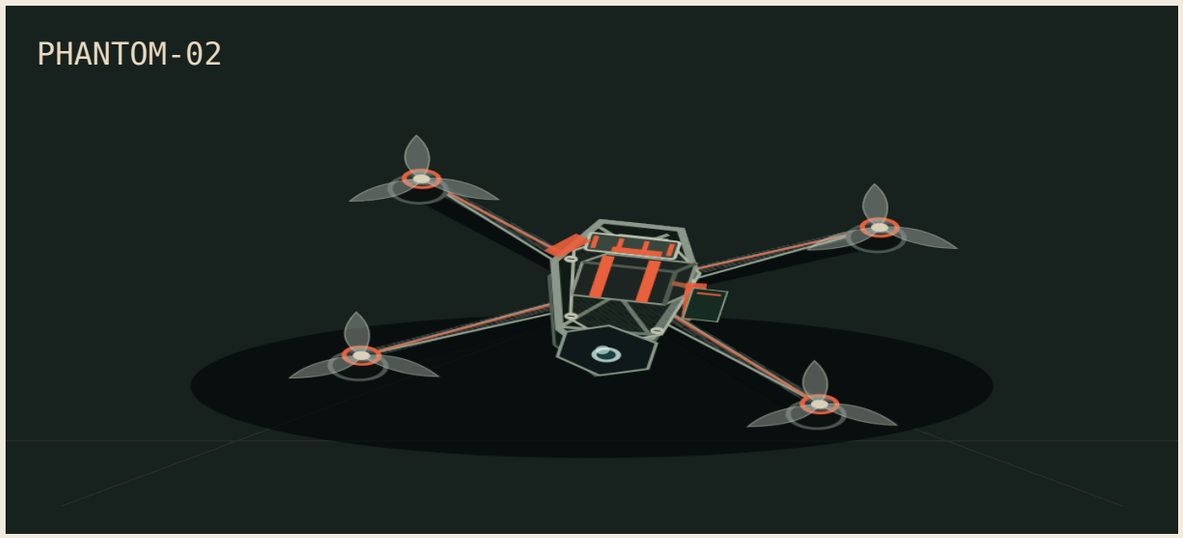

SCOUT / 278 g / 239 km/h / response 7.44

DUCTED / 612 g / 140 km/h / response 2.73

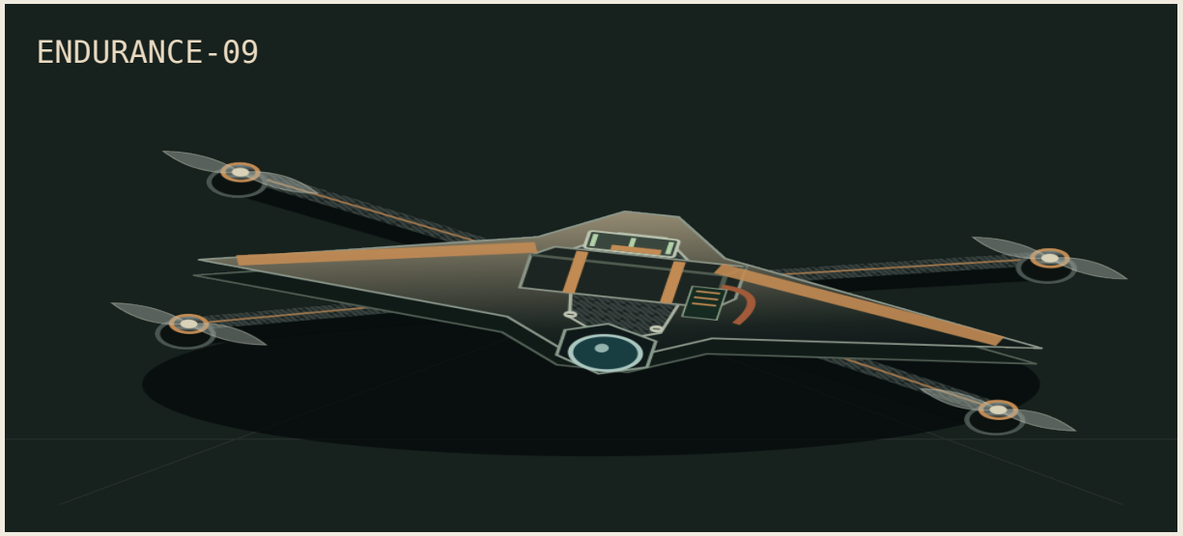

SPEED / 332 g / 259 km/h / response 3.87

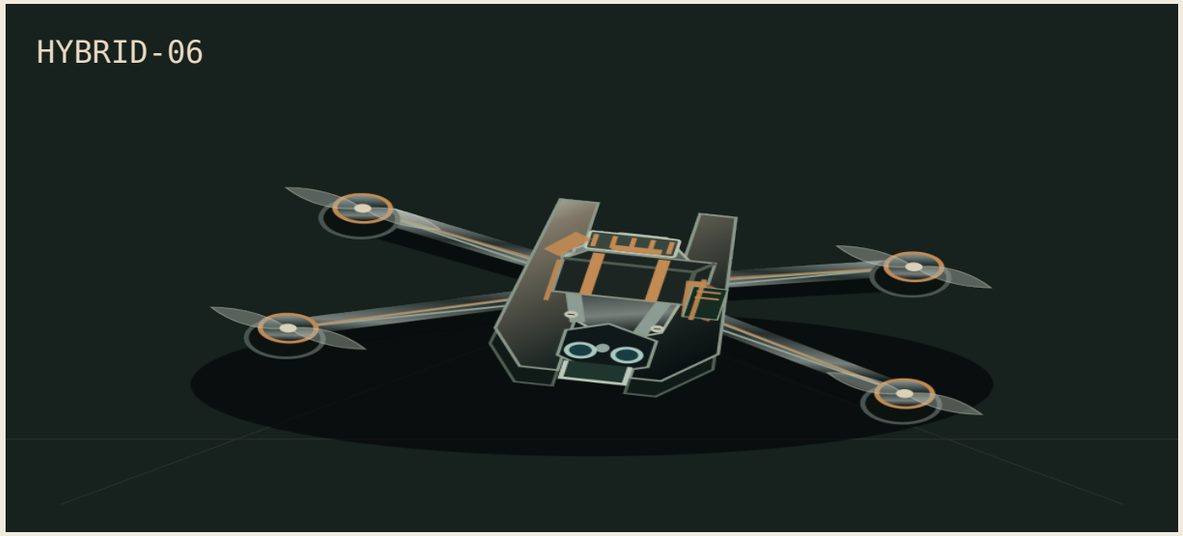

SKELETAL / 230 g / 176 km/h / response 8

13 / Eight machines. Reusable components.

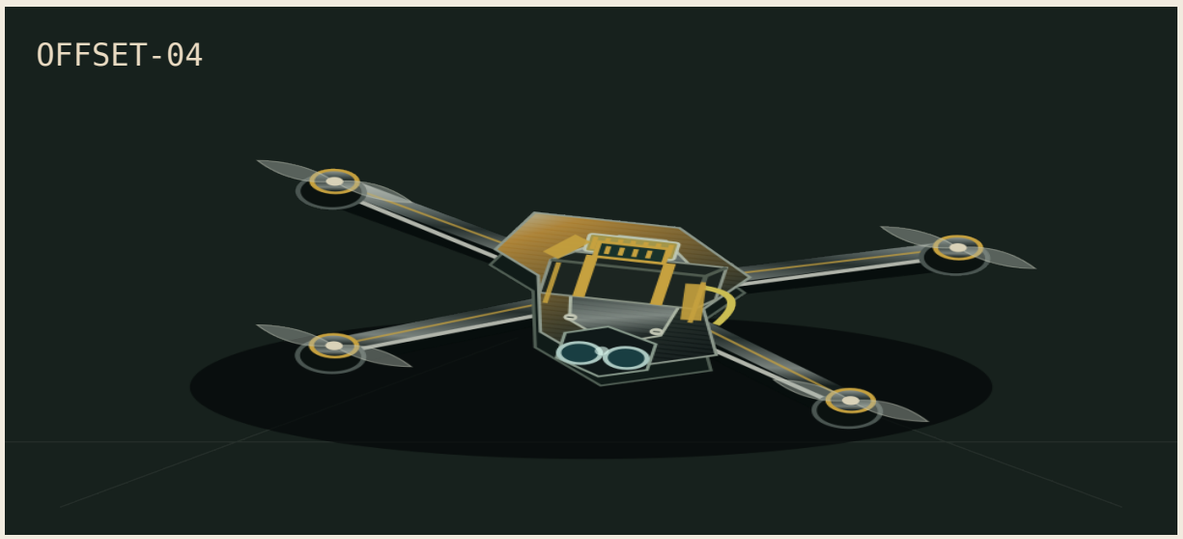

Actual source-rendered examples. User-assigned aircraft names are not fixed classes; personality labels emerge from the shared model.

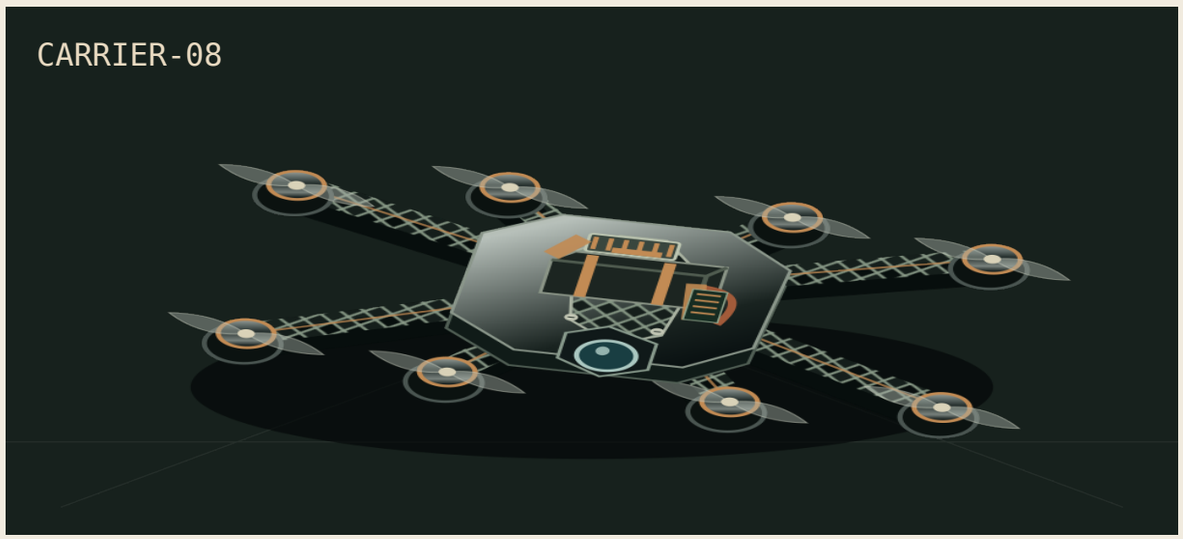

WING / 421 g / 191 km/h / response 2.69

HYBRID / 477 g / 178 km/h / response 3.38

OFFSET / 501 g / 216 km/h / response 4.25

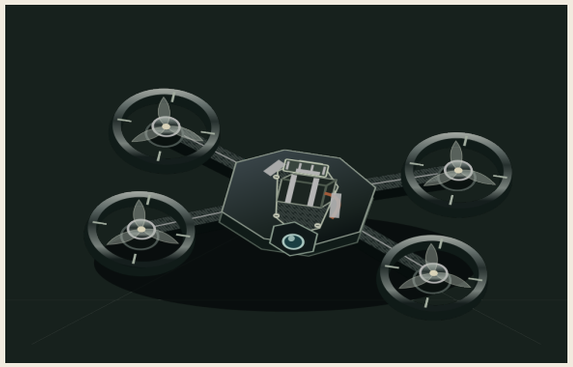

CARRIER / 535 g / 166 km/h / response 2.74

14 / Strip away labels and liveries.

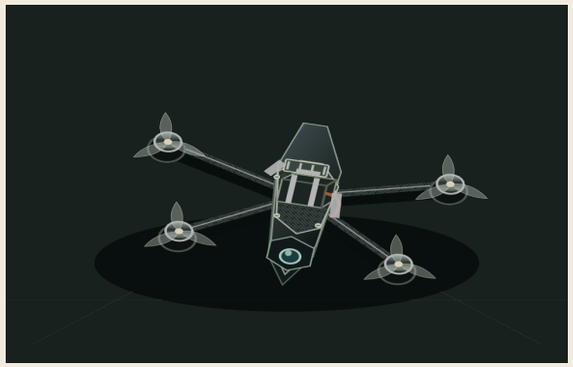

Same material, finish, accents and installed modules; only chassis differs. Eight body/mount arrangements remain distinguishable.

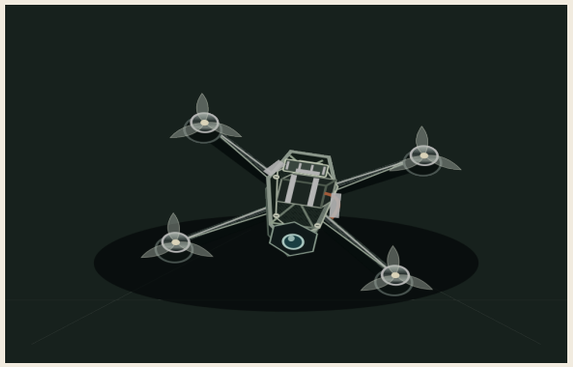

SCOUT

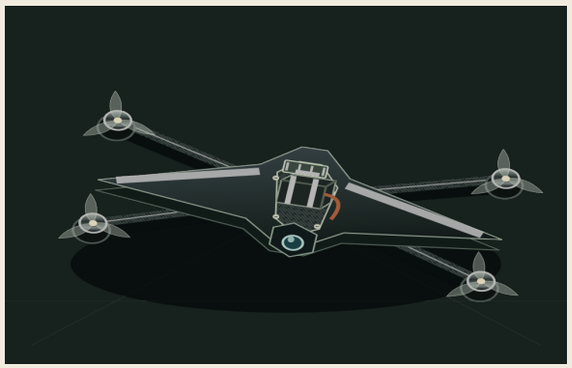

DUCTED

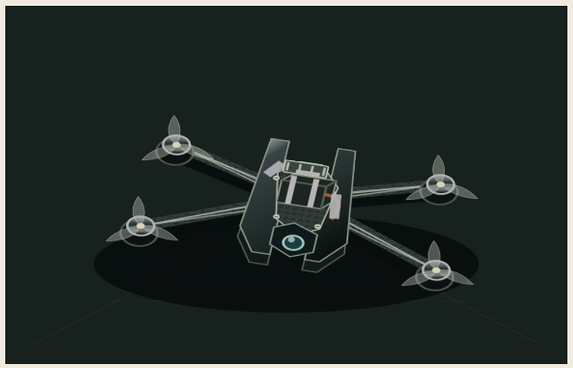

SPEED

SKELETAL

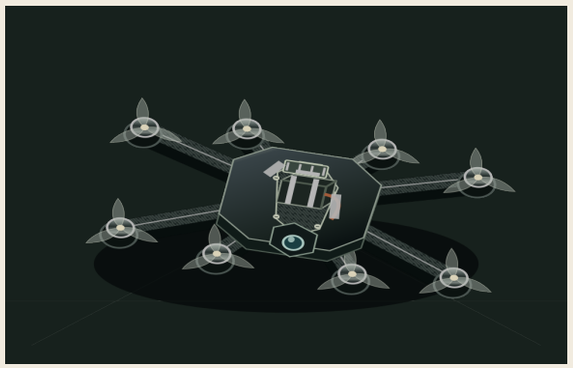

WING

HYBRID

OFFSET

CARRIER

Original top/front/profile views remain for original airframes. New architectures currently use their accurate garage geometry; true extra camera views and the final photorealistic modular art kit remain production work.

15 / Different strategy, not just different ratings.

Reproducible fixed-step model runs. These are scripted simulations, not human playtests. Full scenarios and sectors are in the performance CSV.

AIRCRAFT	MASS g	PACE km/h	RESPONSE	RESERVE s*	CLEAN s	HOLD BOOST
RAZOR-07	278	239	7.44	72	42.82	RETIRED
BRUISER-03	612	140	2.73	150	73.21	FINISHED
ARROW-11	332	259	3.87	94	39.58	FINISHED
PHANTOM-02	230	176	8	117	58.17	RETIRED
ENDURANCE-09	421	191	2.69	311	54.01	FINISHED
HYBRID-06	477	178	3.38	86	57.47	RETIRED
OFFSET-04	501	216	4.25	78	47.55	RETIRED
CARRIER-08	535	166	2.74	73	61.76	RETIRED

Arrow is faster on a clean run. Under a deliberate 1.25-second turn-input delay, Arrow retires while Razor completes. Holding boost depletes Razor, while Endurance finishes. These examples demonstrate trade-offs; they do not establish that every configuration is balanced.

*Reserve assumes steady draw; boost, heat and mistakes alter the actual run.

16 / Keep the hangar. Make experimentation faster.

Local storage, snapshots and honest personal bests. Friend challenge persistence remains a later phase.

HANGAR LAYOUT / EXPANDED CATALOG IN CODE

Own multiple machines

Save/name/compare/edit/duplicate/race. Eight example starting points are collapsible.

Restore without rewriting

Restore a prior snapshot as a new revision; keep original records on their original configuration/model.

Quick tune

Optional jump links within the same six-stage form avoid redoing every selection.

Local ghost and splits

Compatible completed runs only. Up to eight cached traces; neither the trace nor the displayed time is server-verified.

17 / Compatibility should explain itself.

Eight choices per stage yield 31,744 compatible primary engineering combinations and 253,952 combinations including eight cosmetic finishes.

Skeletal battery bay

100 g pack limit. Standard 95 g and Light 62 g fit. Long 165 g and Discharge 119 g are blocked, including incompatible implicit power defaults.

Shared attachment contracts

Current motors/propellers use defined hubs, sensors a front rail and systems a controller bay. These are fictional game engineering contracts.

No silent substitution

An incompatible option is disabled with a reason. The selected component is never replaced behind the visitor’s back.

Keep the schema honest

Unknown IDs, future versions, malformed accents and invalid seeds are rejected. Add new constraints when real new parts require them.

18 / One snapshot. One model. Clear versions.

Implemented client-side determinism supports future verification; it does not create verified races.

Canonical configuration

Stable ordered IDs, explicit defaults, schema, physics version and seed. Full snapshots keep finish; performance identities exclude cosmetics.

Legacy preservation

Original-component saves without the new flag retain fpv-v18. New/tuned builds use engineeringVersion 2.1 and fpv-2.1.0. Old results remain separate.

Personal-best evidence

20 Hz position trace from the 120 Hz simulation, 24 gate splits, bounded payload and compatible model/course/build. This is a visual replay, not canonical input verification.

Same Build / Open Build

The future backend must freeze course/model/rules/conditions, bind attempts and replay inputs before accepting results. Persistent challenges, rematches and accepted-run storage remain unimplemented.

Reuse the map that actually exists.

REPOSITORY INSPECTION / GitHub main and cumulative local v2.1 differ. Preserve the neutralized local map when integrating.

Existing map stack

src/components/FrontMap.jsx + FrontMap.css; TheaterBasemap.jsx; src/data/theaterMap.json and mapAtlas.js; contractLedger.js + landPoints.json. Hero.jsx currently mounts the map at #front.

Current component contract

FrontMap accepts no props. It owns perspective, active pin, pinned card, layers and contract filters internally. All layers start visible. Touch uses explicit tap; keyboard handlers exist.

Smallest adaptation

Propose optional journeyMode/revealStep/onContinue props, keeping standalone defaults. A thin ContractMapSequence controls progressive disclosure; reuse the same SVG geometry and marker/detail components.

Spoiler correction is mandatory

GitHub main exposes a named contract perspective and identity-linked module. Local v2.1 already uses neutral Contracts/contractLedger. Do not merge upstream labels back into the new sequence.

State transitions make the ordering enforceable.

PROPOSED ARCHITECTURE / No application files changed in this planning pass.

Primary transitions

result → talon → broadcast-ended → offer when eligible → map-accept OR map-glimpse → reveal. No route from result directly to offer. No timer may transition away from an unanswered offer.

Profile completion and skipping

Natural end, final Continue and video-ended share one idempotent exit. Existing Skip closes the profile before the transition; record it as skipped, not watched/completed. Never insert an offer mid-profile.

Qualification remains honest

Use a frozen race snapshot: championship, nonpractice, nonassisted, completed and flagged. Current flagged means second place. DNF, assisted and other finishes see Talon → broadcast-ended → book; retry can later earn eligibility.

No new anonymous ping component

Adapt the existing ping into the post-profile offer. Remove the early FLIGHT DATA FLAGGED interruption and 01/02 ghost; they reveal the turn early and assume a podium.

Persist the choice. Preserve the aircraft.

PROPOSED STORAGE / Narrative state is separate from pilot, configuration, physics, race records and personal-best traces.

Minimal versioned record

afl:narrative:v22: schemaVersion, journeyVersion, profileExit(completed/skipped), eligibleRunId, decision(accept/decline/null), revealStep, bookSeen. Use a local opaque run ID, not a verified-result claim.

Safe resume

Save transition intent and decision before navigation. Refresh on offer restores an unanswered offer; refresh after a choice restores its branch. Missing/corrupt/blocked storage falls back to session memory.

Return without repetition

Once bookSeen, result actions lead to replay/tune/hangar with optional revisit story. A nonqualifying visitor who later earns eligibility may opt into the unseen offer; do not force it after each race.

Identity stays private

Do not store email or private pilot tokens in narrative analytics. Choice changes no build, timing, country, ranking, map permission or marketing consent.

Mobile and accessibility are part of the scene.

PROPOSED ACCEPTANCE REQUIREMENTS / Static compositions do not establish browser or real-phone usability.

Controls and focus

Offer buttons at least 48 px, equal hierarchy, no default selection. Focus heading on state entry; use existing dialog focus boundary. Back/Escape never silently means decline or accept.

Readable map

Fit continental overview without requiring precision pan. Provide a keyboard/touch location list, readable bottom-sheet details and close control. Prevent scrolling behind the dialog; respect safe areas and text zoom.

Motion and silence

No flashing, forced audio or required timed interaction. Pause on tab hide; reduced motion uses static reveals and manual Next. A transcript/manual exit replaces time dependence.

Performance and failure

Lazy-load the existing map after the decision, optionally preload during Talon. Map failure still offers Continue to novel. No added video or render dependency; test real iPhone FPS and memory before release.

Canon audit: verified, proposed and blocked.

LIVE CHECK / Current connected manuscript fetched 21 October 2026; returned modification time 18 October 2026, 05:11 UTC.

Verified sporting foundations

Live includes Nations Series, black-and-silver Talon and unconventional racing lines. Preserve the sporting treatment; do not add career statistics or connect him to the sender. No private identity is reproduced here.

Amount and offer are not canon-confirmed

No $25,000 / 25000 literal found in Live. The anonymous offer screen and its amount remain creative proposals. Confirm amount, currency, terminology and whether the invitation is canon or an authorized adaptation.

Geography needs an explicit story-state check

Atlas contains real/fictional origin fields and projected geography; front and salients are authored drawings. Verify chronology, regional control and visible marker summaries against Live before release. Generated ledger sectors are not verified contract sites.

Profile and public-surface audit

Review the four existing TALON_BEATS, including maintenance-gap wording and closing line, against current Live. Scan map aria labels, source outputs, metadata, share cards, transcripts and analytics for identity links. Sample remains the author-approved exception.

Implementation plan and QA gates.

FUTURE WORK / This document locks the order; it does not implement or claim to test the new narrative.

Phase 1 / Route and copy

NationsSeries.jsx: change result continuation and documentary callback; freeze eligibility; adapt ping. TalonProfile.jsx: distinct completed/skipped exits, one-shot callbacks. New narrative state helper + unit tests. Keep race and builder unchanged.

Phase 2 / Existing-map integration

FrontMap.jsx/.css: optional presentation controls with unchanged standalone behavior. New thin ContractMapSequence wrapper; reuse TheaterBasemap, mapAtlas and neutral ledger. No combat, new map or invented mission data.

Phase 3 / Book and measurement

Retain reveal and cover; expose existing launch-list destination as secondary where needed. analytics.js: profile exit, closure, offer viewed, decision, map skipped/completed, book/sample; deduplicate events and avoid personal or private offer data.

Phase 4 / Evidence before release

Test ordering, all qualification branches, double callbacks/taps, refresh/storage failures, decline nonrestriction, map failures and replay bypass. Browser + real-phone + keyboard/screen-reader + reduced-motion QA. Build/lint/tests after implementation; no deployment in this scope.

Keep / Modify / Add / Remove

DECISION TABLE / Approved design remains distinct from existing local implementation.

KEEP

Opening FPV/poster, all six builder stages and 48 options, aircraft model and trade-offs, fabrication, pilot, training, racing, results, hangar, original cover, sample and optional destinations.

MODIFY

Move existing ping after Talon; profile exit callbacks; optional map presentation controls; versioned narrative persistence and funnel events. Standalone map and returning-player access remain.

ADD

Quiet broadcast-ended beat; private offer choice; brief accept map sequence and decline glimpse. These are proposed screens shown as static mockups in this PDF.

REMOVE FROM THE PRIMARY SEQUENCE

Pre-profile ping, any Talon-to-employer implication, forced map tour, auto-decision, judgment meter and repeated mandatory reveal. No existing workshop or map functionality is deleted.

What this review proves - and what it does not.

PLANNING DELIVERABLE / Source inspection, Live retrieval and static document QA only. No source edits, GitHub writes, deployment or new video.

Inspected this pass

Local v2.1 flow, Talon profile/media data, raceResult flag, FrontMap/basemap/ledger/atlas and current GitHub FrontMap. Current Live retrieved from the canonical document pointer; private material excluded from this review.

Existing baseline evidence

v2.1 reported 39 automated tests, lint and build passing. That evidence predates v2.2, is not rerun here, and does not validate these proposed screens or interactions.

Still to verify

Exact payment/currency; final sporting copy; map chronology and public labels; browser/iPhone interactions; focus, zoom, safe areas and performance; actual visitor understanding. No false server-verification or cinematic-footage claim.
